

**International Workshop on
Land Cover/Land Use Changes (LCLUC), Forestry, and Agriculture
in South/Southeast Asia**
Hotel Cambodiana, Phnom Penh, Cambodia: 8th - 10th August, 2022

Land Cover/Land Use and Agriculture in Cambodia – Current Status and Priorities

Seng Vang, Ph. D

Director

Department of Agricultural Land Resources Management

General Directorate of Agriculture (GDA)

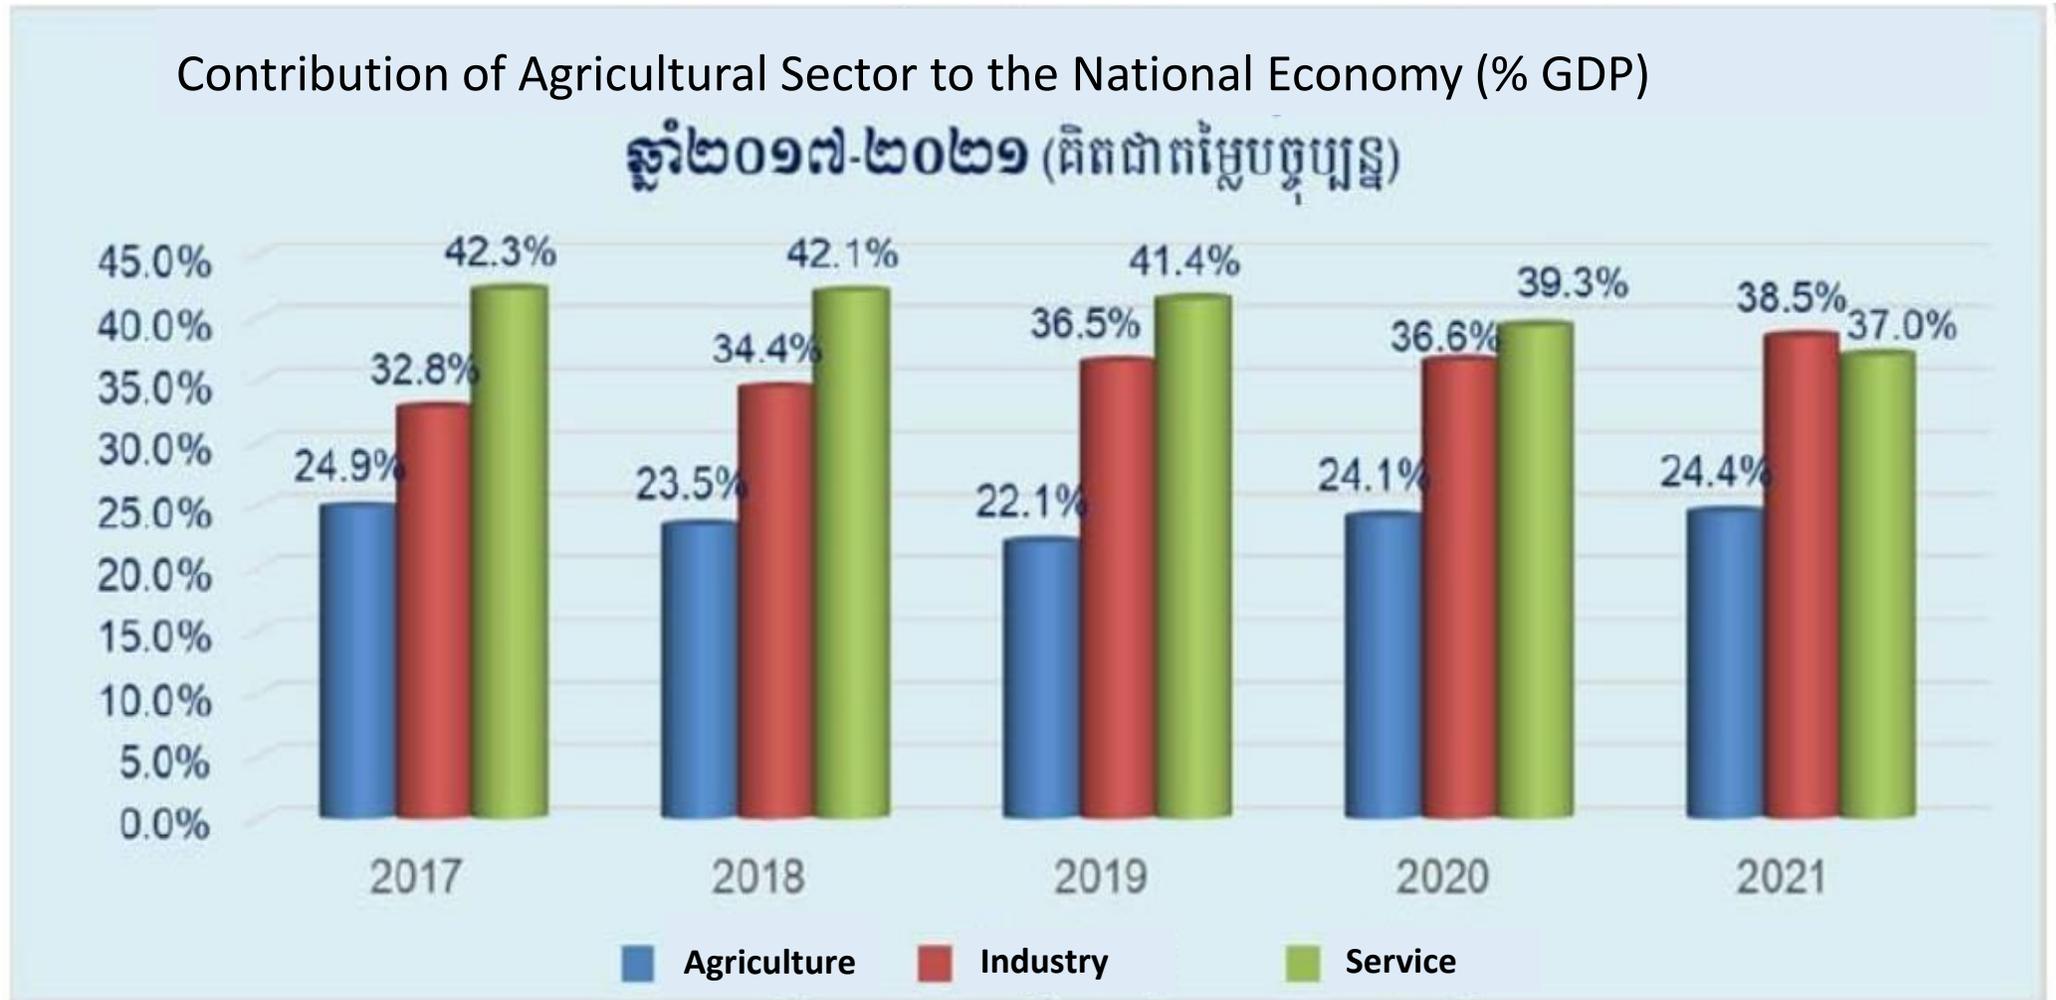

Outlines

1. Agriculture
2. Land cover/Land use
3. Land degradation
4. Current initiatives for land restoration
5. Priorities for sustainable agricultural land management

1. Agriculture

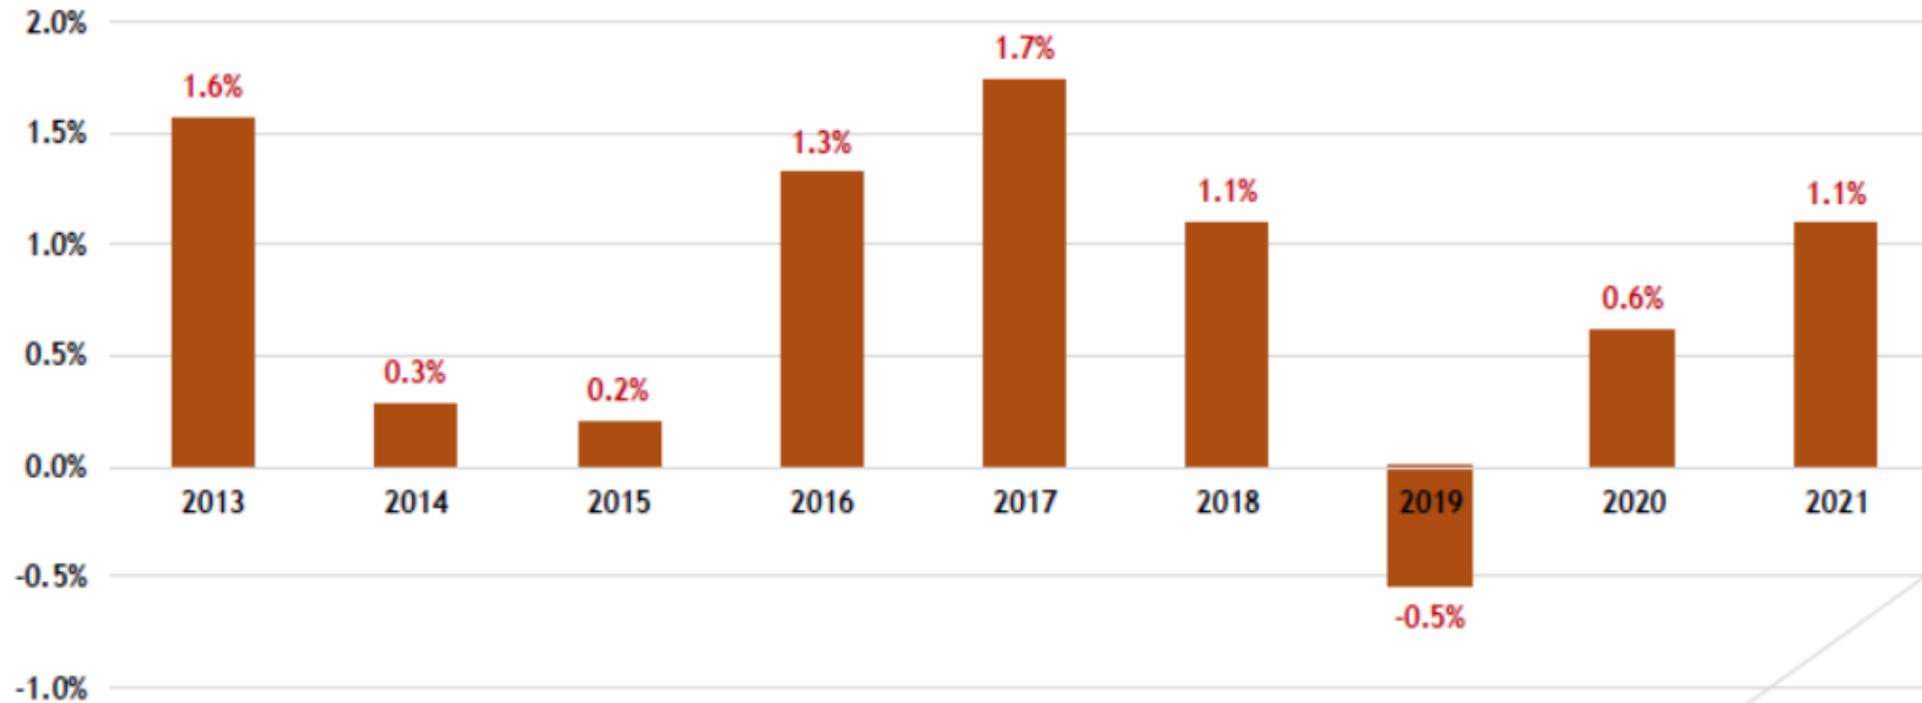

MAFF (2022). DPS

Agricultural subsectors (2017-2021)

MAFF (2022). DPS

Agricultural growth 2013-2021 (%)

MAFF (2022). DPS

Current agricultural land use

2. Land cover/Land use

3. Land degradation

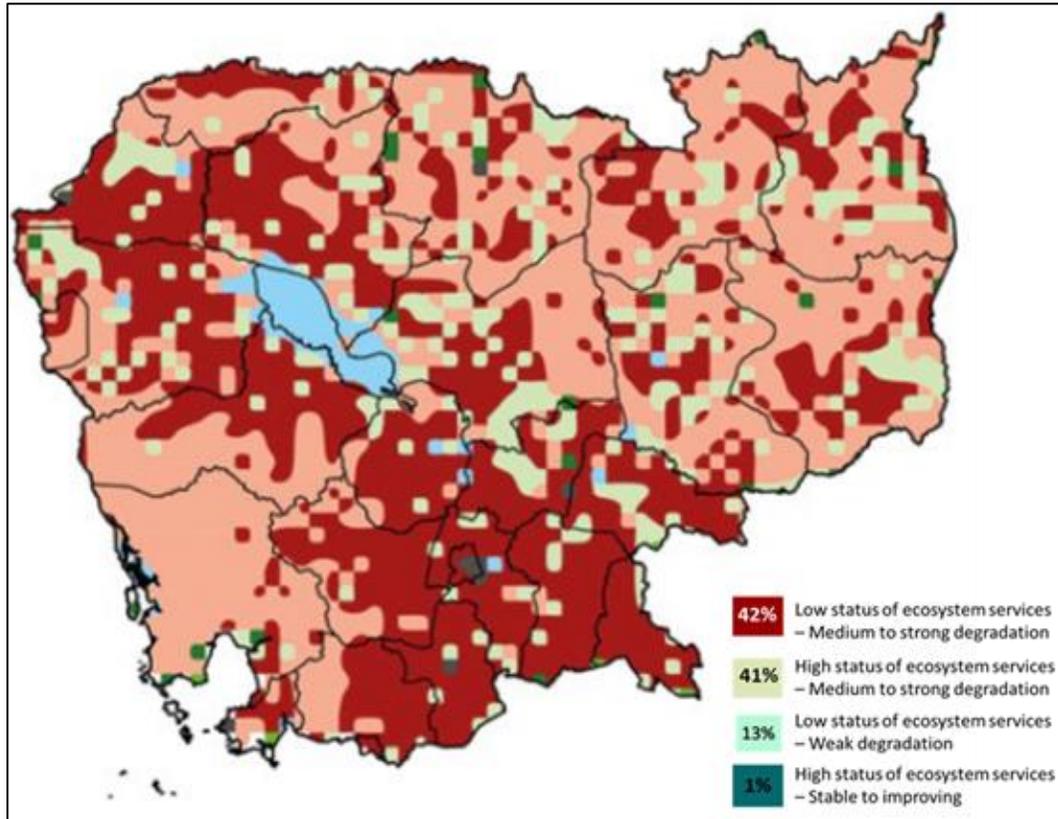

Vulnerability:

- 0.45 million ha – highly
- 7.69 million ha – moderately
- 9.99 million ha – low to none

Land degradation – impact

Land Degradation Source: GLADIS-FAO16

- **Annual cost of land degradation** is estimated at USD 677 million or 8% of the country's GDP (GM/UNCCD, 2018)
- Conventional tillage practice (Maize) increased soil loss by 13 times more than CA practice on 5% slope (DALRM, 2020).
- Soil erosion resulted in losses of SOC (870 kg/ha), N (90 kg/ha), P (0.42 kg/ha), K (10 kg/ha) (DALRM/GDA 2020, unpublished data)

4. Current initiatives for land restoration

- Conservation Agriculture (CA) - Initiatives towards the agroecological transition
 - Bos Khnor (Kampong Cham) – Center of excellence for CA&SI in upland
 - Stung Chinit (Kampong Thom) – CA for lowland rice
 - Battambang – CA extension activities
- ASSET – Agroecology and safe food system transition (Regional project)
 - Preah Vihear – CA and organic agriculture systems
- CASIC – Cambodia Conservation Agriculture and Sustainable Intensification Consortium
 - A PPP platform to scale CA&SI in Cambodia (MAFF lead)

CA adoption in Cambodia

5. Priorities for SLM towards 2030

- Promoting sustainable agricultural land resources management
 - Promoting soil conservation R4D,
 - Achieving land degradation neutrality through National Action Program to combat land degradation (NAP),
 - Soil education (Promoting farmers soil extension program),
 - Soil science (Encourage postgraduate research program thru international cooperation)
- Develop agricultural zoning
 - Land resources and land suitability assessment, crop mapping
- Strengthening climate resilient capacity
 - Apply soil conservation technology (CA, green cover, biochar, etc.) to increase agricultural productivity and to promote environmental-friendly agricultural production, and also contributing towards carbon neutrality.

Thank you,...
