ADAPTING CLIMATE CHANGE IMPACTS IN THE URBAN ECOSYSTEM: GREEN SPACES AND COMMUNITY CARBON FOOTPRINT IN MALAYSIA

Mastura Mahmud
& Nurul Akmar Idris
Universiti Kebangsaan Malaysia

Preamble: CO₂ emissions for Malaysia

Malaysia: CO₂ emissions and GHG emissions (per capita per year: fossil fuels & industrial processes)

Reference: Olivier, J.G.J., Janssens-Maenhout, G., Muntean, M. Peters, J.H.A.W., Trends in global CO₂ emissions - 2015 report, JRC report 98184 / PBL report 1803, November 2015.
GHG time series 1990-2012 per capita emissions for world countries
http://edgar.jrc.ec.europa.eu/overview.php?v=GHGts_pc1990-2012

Emissions (Gg CO₂ eq)

Time Series of GHG Emissions for the Waste Sector in Malaysia

Population plays a major role in determining the wastes

(Ref: BUR 2016)

GHG Indices for Malaysia

Population	23.3	26.1	29.1
GDP at 2005 prices	431.23	544	711.8
Approach 1: without LULUCF	2000	2005	2011
CO ₂ eq emissions (mil ton)	195.7	263	287.8
CO ₂ eq emissions per GDP (ton/cap)	8.4	10	9.9
CO ₂ eq emissions/ capita (ton/1000 RM)	0.5	0.5	0.4
Approach 2: with LULUCF (emissions)	2000	2005	2011
CO ₂ eq emissions (mil ton)	218	289	290
CO ₂ eq emissions per GDP (ton/cap)	9.4	11.1	10
CO ₂ eq emissions/ capita (ton/1000 RM)	0.5	0.5	0.4
Approach 3: with LULUCF (emissions & removals)	2000	2005	2011
CO ₂ eq emissions (mil ton)	-32.9	30.1	27.3
CO ₂ eq emissions per GDP (ton/cap)	-1.4	1.2	0.94
CO ₂ eq emissions/ capita (ton/1000 RM)	-0.07	0.05	0.04

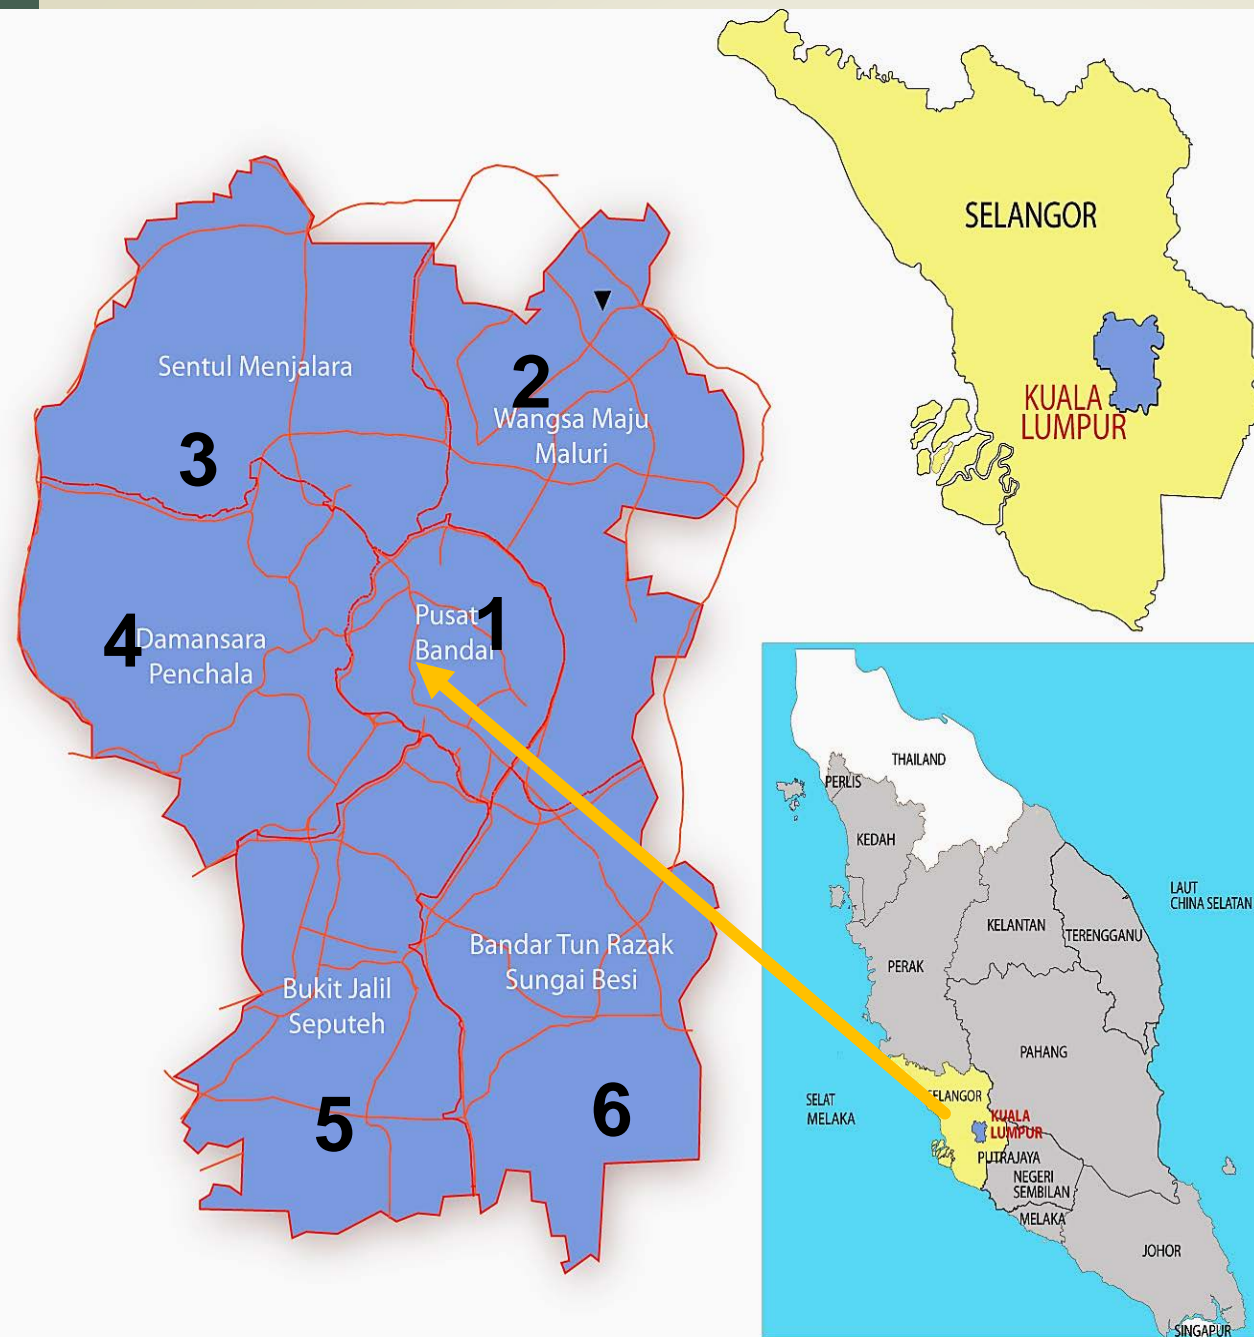

Preamble: Cities contribute to CC

- ▶ **Cities are major contributors to climate change:** covering < 2 % of the earth's surface, cities consume 78 % of the world's energy and produce more than 60% of CO₂ & GHG (energy generation, vehicles, industry, and biomass use).
- ▶ Cities and towns are vulnerable to climate change (rising sea levels, intense heat and extreme weather events)
 - ▶ USA: The Heat Wave Sweeping the East Coast Comes With a Side of Smog (Bloomberg - 06/13/2017)
 - ▶ USA: Why California's Climate Change Fight Is Also About Public Health (Time Magazine - 06/15/2017) :
 - ▶ Temperatures in Iran city of Ahvaz, hit 53.8C in one of world's hottest days ever recorded (Evening Standard-07/1/2017)
- ▶ **WHY CITIES CAN BE THE SOLUTION TO CLIMATE CHANGE.**
- ▶ Despite these risks, many cities have not yet addressed climate change. The reasons : **lack** of relevant **city policies and action plans**; existence of regulations on urban planning and environment which have not been adjusted to manage climate change; slow response to climate disasters from **lack of capacity and resources**; and **lack of public awareness** on climate variability and climate change-induced hazard mitigation.

KUALA LUMPUR CITY

- ▶ City activities contribute to 75% of world carbon dioxide (CO₂) emissions - the United Nations Human Settlements Program (UN-Habitat)
- ▶ Kuala Lumpur as the rapidly developing capital city of Malaysia is facing the same problem.
- ▶ Uncontrolled urbanization in Kuala Lumpur caused green space to decline by 43% from 1990 to 2010.

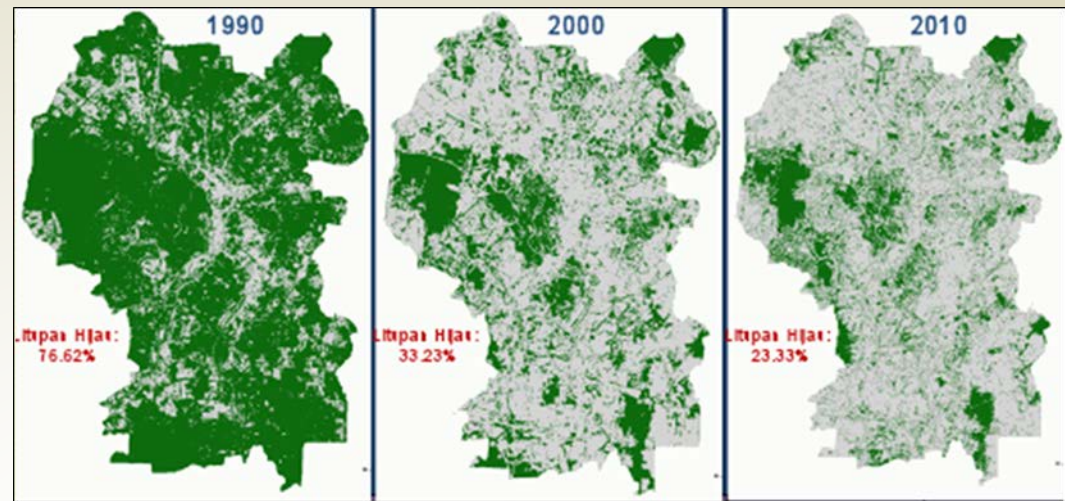

#	Zones	Area (Ha)
1	Kuala Lumpur centre	1,813
2	Wangsa Maju-Maluri	4,614
3	Sentul-Manjalara	4,657
4	Damansara-Penchala	4,520
5	Bukit Jalil-Seputeh	4,390
6	Bandar Tun Razak-Sg Besi	4228

Parks in Kuala Lumpur

Trend of green areas in city of Kuala Lumpur

Changes in natural coverage in Kuala Lumpur from 1990, 2000 and 2010.

Year	Population	Green area (%)	Green area (ha)	Green area per person (km ²)
1990	1,145,342	76.62%	186.19	162.56
2000	1,379,310	33.23%	80.75	56.71
2010	1,588,750	23.33%	56.69	35.68

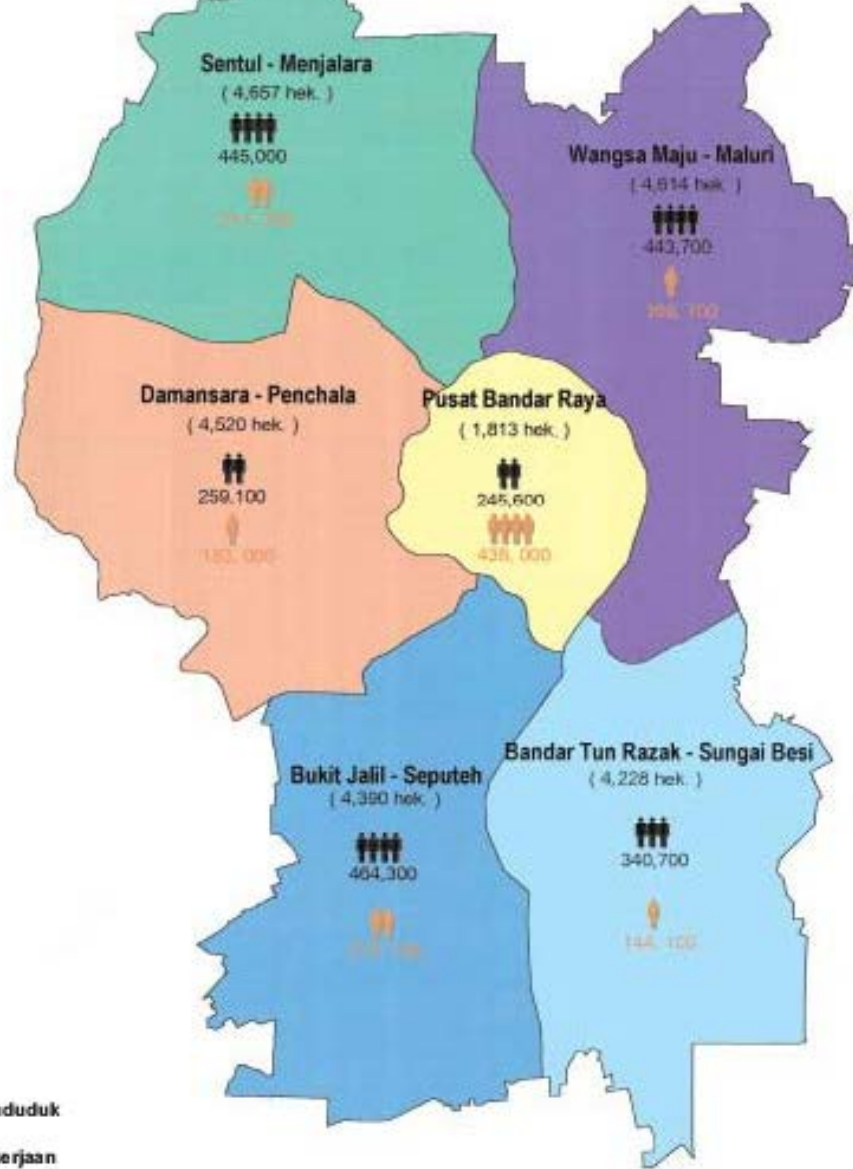

Name	Location	Size (ha)	Hierarchy
Perdana Lake Garden	Central KL	70	City park
Kepong Metropolitan Parks	North. Sentul – Manjalara	127	District park
Batu Metropolitan Park	North. Sentul – Manjalara	24	District park
Titivangsa Lake Garden	West. Wangsa Maju - Maluri	46	District park
Pudu Lake Garden	South West. Bandar Tun Razak-Sg Besi	26	District park
Permaisuri Lake Garden	South West. Bandar Tun Razak- Sg Besi	50	District park
Bukit Jalil Park	Southern. Bukit Jalil -Seputeh	22	District park
Datuk Keramat LakeGarden	West. Wangsa Maju - Maluri	6	Neighborhood park
Manjalara Lake Garden	North. Sentul – Manjalara	10.6	Neighborhood park
TOTAL		381.6	

PROBLEM STATEMENT

- ▶ What information can be accessed about carbon dioxide trace data from household and human respiratory activities in Kuala Lumpur?
- ▶ How is the green space capability of existing large parks in absorbing CO₂ emissions from household activities and breathing in six strategic zones according to the Kuala Lumpur 2020 development plan?
- ▶ Analyze trace carbon dioxide data from household and respiratory activities in six strategic zones and analyse the ability of green space (large gardens) to absorb CO₂ emissions according to the Kuala Lumpur 2020 Development Plan.

- ▶ This study is based on a globalized issue, which is the increase in the amount of CO₂ emissions due to urbanization.
- ▶ Household activity data were obtained from a randomly distributed survey form to respondents to find out the lifestyle that contributed to the release of CO₂ Online Calculator
- ▶ The main green space data of large parks in each zone is collected to determine the ability of CO₂ absorption.

- Emission of carbon footprint from Households in Six Strategic Zones in Kuala Lumpur (Kuala Lumpur Development Plan): Online Carbon footprint Calculator
- ❖ This study uses a non-probability sampling. The sample of the study consisted of randomly selected civilians separated by residential areas based on six strategic Kuala Lumpur zones.
- ❖ A total of 162 respondents surveyed.
- The calculation of CO₂ absorption. The amount of CO₂ absorbable from the large gardens found in each zone by assuming all the green areas are composed of trees.

Welcome to the web's leading carbon footprint calculator

First, please tell us where you live: [Latitude](#)

Country:

Zone:

Carbon footprint calculations are typically based on annual emissions from the previous 12 months. If you would like to calculate your carbon footprint for a different period use the calendar boxes below from to

Next, select the appropriate tab above to calculate the part of your lifestyle you are most interested in. Or, visit each of the tabs above to calculate your full carbon footprint.

Following your calculation, you can offset / neutralise your emissions through one of our climate-friendly options.

Sources of our calculations

The calculations for primary emissions are based on conversion factors sourced from:

- Department for Environment, Food and Rural Affairs (DEFRA) - UK
- World Resource Institute (WRI) Greenhouse Gas (GHG) Protocol
- Vehicle Certification Agency (VCA) - UK
- US Environmental Protection Agency (EPA) - USA
- US Department of Energy (DOE) - USA
- Green House Office - Australia
- Standards Association (CSA) GHG Register - Canada

Household carbon footprint calculator

Enter your consumption of each type of energy, and press the Calculate button

Your individual footprint is calculated by dividing the amount of energy by the number of people in your house. To calculate your full household footprint, select "H"

How many people are in your household?

Electricity: kWh

Natural gas: kWh

Heating oil: litres

Coal: tonnes

LPG: litres

Propane: litres

Wood: tonnes

Total House Footprint = 0.00 tonnes of CO₂e

Total Car Footprint = 0.00 tonnes of CO₂e

Welcome House Flights Car Motorbike Bus & Rail Secondary Results

Your Carbon Footprint:

- House 0.00 tonnes of CO₂e
- Flights 0.00 tonnes of CO₂e
- Car 0.03 tonnes of CO₂e
- Motorbike 0.00 tonnes of CO₂e
- Bus & Rail 0.00 tonnes of CO₂e
- Secondary 0.00 tonnes of CO₂e

Total = 0.03 tonnes of CO₂e

Your Footprint Country Average World Target

To offset some or all of your carbon footprint, tick the sections you would like to offset in the list above, and click the Offset button.

Total To Offset = 0.03 tonnes of CO₂e

- Your footprint is 0.03 tonnes per year
- The average footprint for people in Malaysia is 7.00 tonnes
- The average for the industrial nations is about 11 tonnes
- The average worldwide carbon footprint is about 4 tonnes
- The worldwide target to combat climate change is 2 tonnes

If you're using a public computer, or want to try again, you can [clear your carbon footprint data](#)

For ideas on how to reduce your carbon footprint, see the [CO₂ Reduction section](#) of our website.

Why not [sign up for our newsletter](#) to keep informed of other ways you can reduce your carbon footprint?

Population of in KL (2016)	Household emissions (ton/yr)	Respiration (ton/yr)	CO ₂ Sequestered (ton/ha/yr) 381 ha
1.79 million	10,901,100	4,454,075	14,004

CONCLUSION

- ▶ The release of carbon footprint in each zone is particularly alarming as every human activity in daily life produces CO₂.
- ▶ This study focuses only on the C footprint from household only and not other sources.
- ▶ While the ability of green space to absorb CO₂ is only calculated from large parks that are available in every zone.
- ▶ LULUCF sector plays a key role in Malaysia's action to address climate change, as it acts as a net sink. The Govt allocated USD30 million for forest reserves projects between 2010-2015, where 53,700 ha have been gazetted as Permanent Reserved Forest, contributing to 13,797 kt CO₂ eq.

Implications & Solutions:

- Investigation into the habits of inhabitants in Kuala Lumpur.
- Results can be used by local authorities into planning for a green living concept
- **CITIES ARE OUR FUTURE. C40 Cities:**
 - “We believe that a better global future lies in urban innovation and action. As the majority of future humans will live in cities, it just makes sense that our solution to climate change will reside there too.”
 - “When properly planned, capacitated, and managed through the appropriate governance structures, cities can be places of innovation and efficiency.
 - Together with their local authorities, they have the potential to diminish the causes of climate change (mitigation) and effectively protect themselves from its impacts (adaptation)” (UN Habitat for a Better Urban Future)

THANK YOU
