1. Introduction
2. Rice monitoring research works
3. 2019 CEOS Chair Initiative
4. Conclusions

Rice in Vietnam mainly grown in the **Mekong Delta** and **Red River Delta**

Mekong Delta (Source: GSO, 2016)

- Area: 40,82 Km² (1/8)
- Population: 17.66 M (~1/5)
- MD accounts for more than half (23.8/43.2 Mt) of the country's rice production (>1/2)

MD is one of the most affected regions in the world by **global warming**.

Studies need to be conducted to **quantify the changes** observed **by satellites** in LULC, in cultural practices, etc.

→ **Food security**

Rice cropping system	Rice season
----------------------	-------------

Single rice crop	Traditional rice (rain-fed)
------------------	-----------------------------

Double rice crop	SA – AW (rain-fed)
------------------	--------------------

WS – SA (irrigated)

Triple rice crop	WS – SA - AW
------------------	--------------

Sowing-transplanting period

Vegetative stage

Reproductive stage

Ripening stage

Main rice-based cropping systems in the MD

Pictures of rice growing stages

Rice crop		Planting	Harvesting
English name	Local name		
Winter Spring (WS)	Dong Xuan	Nov./Dec.	Mar./Apr.
Summer Autumn (SA)	He Thu	Apr./May	Jul./Aug.
Rainy season	Thu Dong (Autumn Winter- AW)	Jul./Sep.	Oct./Dec.
	Mua (Traditional rice)	Jul./Sep.	Nov./Jan.

Main rice seasons in An Giang province, Mekong Delta

Previous rice projects:

- Data used:
 - ✓ ERS2-SAR data, 1997-1998;
 - ✓ ENVISAT-ASAR data, 2007-2008;
 - ✓ TerraSAR-X & ENVISAT-ASAR data, 2010-2011;
 - ✓ COSMO-SkyMed, 2013.
- Rice mapping: Temporal change measurement, Single-date mapping algorithm
- Yield estimation model: Statistical model, Agro-meteorological model (AMM)

On-going rice projects: VNRice & GEORice

- Data used:
 - ✓ Sentinel-1,
 - ✓ RADARSAT-2,
 - ✓ ALOS-2,
 - ✓ Landsat-8, Sentinel-2, MODIS

Objectives

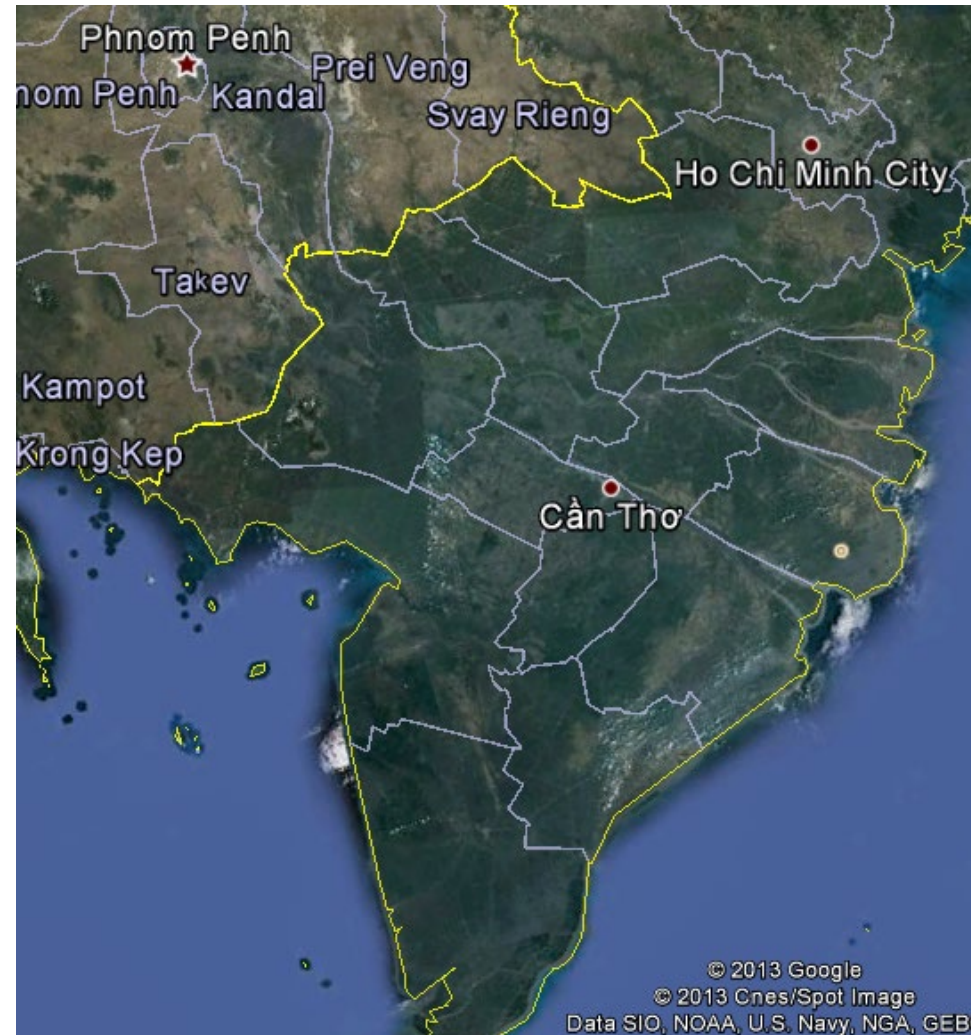

To evaluate the use of remote sensing data in rice monitoring & yield estimation, towards an operational system for rice crop inventory in Vietnam.

A distribution map of estimated rice yield of WS 2018 in An Giang

- **Infrastructure:** by help of IMSG (I. M. Systems Group, Inc.)
- **Software:**
 - Supports from CSIRO&CEOS
- **Satellite Data:**
 - Landsat from USGS
 - ALOS from JAXA
 - Sentinel-1&-2 from ESA
- **Priority applications:**
 - Forest monitoring
 - **Rice monitoring**
 - Water monitoring.

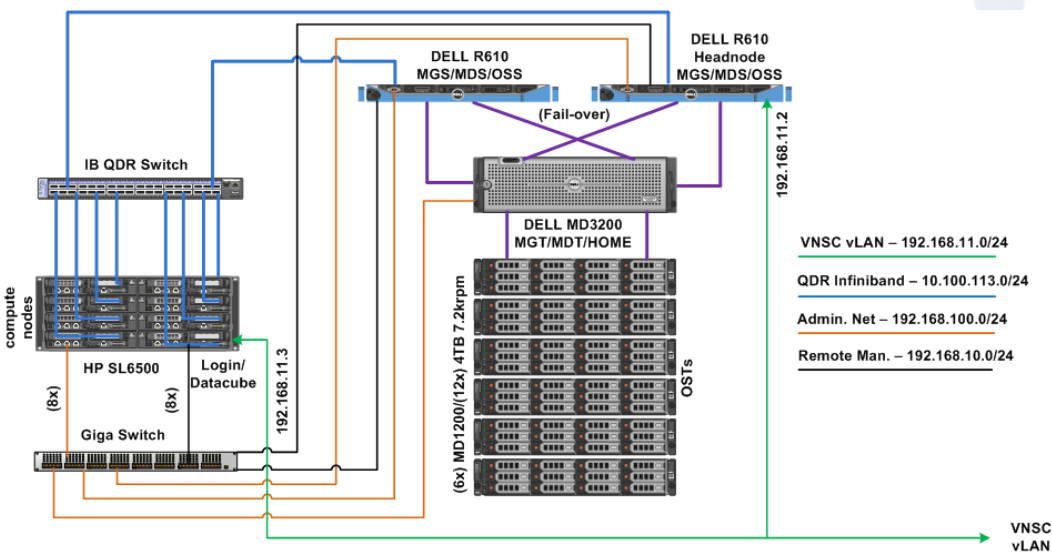

Welcome to the Vietnam Open Data Cube

Vietnam National Space Center is using the power of the Open Data Cube to help address the needs of satellite data users, giving them a better picture of their land resources and land change.

- Ease of use and access to satellite-based data
- Multiple dataset interoperability and spatial consistency
- Use of "Analysis Ready" Data Products
- A Shift in Paradigm from Scenes to Pixels

[Log In](#)

1 head node, 1 login node, 7 compute nodes (each: 16 core 2.2GHz, 64GB RAM), 40Gb/s Infiniband Interconnect network
 Full redundant parallel storage - LustreFS: 195TB, max read/write speed: 1.9GB/s
 Total storage capacity (including work, home, local): ~ 220TB
 Can be expanded to hundreds of compute nodes, hundreds of TBs of storage

VNSC CEOS Chair 2019

- Application Focused **Initiatives**
 - Carbon Observations (forested regions)
 - Observations for Agriculture (**rice**)
- **Regional Observatory** can be built with ready application built-in such as forest monitoring and rice monitoring for **Mekong river area**.
- **Rice monitoring initiative:**
 - VNSC/STAC: VNRice project
 - CNES/CESBIO: GEORice project
 - JAXA&RESTEC
 - Cross validation of the results made by 3 teams.

CROP MONITOR FOR AMIS

NO. 41

July 2017

The Group on Earth Observations' Global Agricultural Monitoring (GEOGLAM) Initiative developed the Crop Monitor whose objective is to provide AMIS with an international and transparent multi-source, consensus assessment of crop growing conditions, status, and agro-climatic conditions, likely to impact global production. This activity covers the four primary crop types (wheat, maize, rice, and soy) within the main agricultural producing regions of the AMIS countries (G20+7). The Crop Monitor reports provide cartographic and textual summaries of crop conditions as of the 28th of each month, according to crop type. There is another Crop Monitoring Initiative called the Early Warning Crop Monitor (geoglam-crop-monitor.org/), which has grown out of this initiative.

AMIS Agricultural Market Information System

GROUP ON EARTH OBSERVATIONS

Crop Monitor a geoglam initiative

Global Agricultural Monitoring

- Previous studies have proven **remote sensing is an efficient tool for rice monitoring using various SAR data**, ENVISAT-ASAR, TerraSAR-X, COSMO-SkyMed, RADARSAT-2, ALOS-2, Sentinel-1.
- On-going research projects have been doing for rice monitoring to **validate the method at regional and national scale**.
- **Rice monitoring initiative is focused on Mekong region in international collaboration** with CNES/CESBIO (GEORice project) and JAXA&RESTEC and its results will be validated and presented at the 2019 CEOS plenary.

Thank you

Dr. Lam Dao Nguyen
