

TROPICAL DECIDUOUS FOREST OF SOUTH ASIA: MONITORING DEGRADATION AND ASSESSING IMPACTS OF URBANIZATION

Columbia University: R. DeFries, C. Galletti, P. Mondal, N. Velho, S. Baquie

Johns Hopkins University: J. Urpelainen

Wildlife Institute of India, Dehradun: Q. Qureshi, Y. Jhala

Azim Premji University, Bangalore: H. Nagendra

Ashoka University, Delhi: M. Agarwala

“The tendency of people to move to cities, either out of desire or perceived necessity, creates a great opportunity.”

US edition ▾
**The
Guardian**

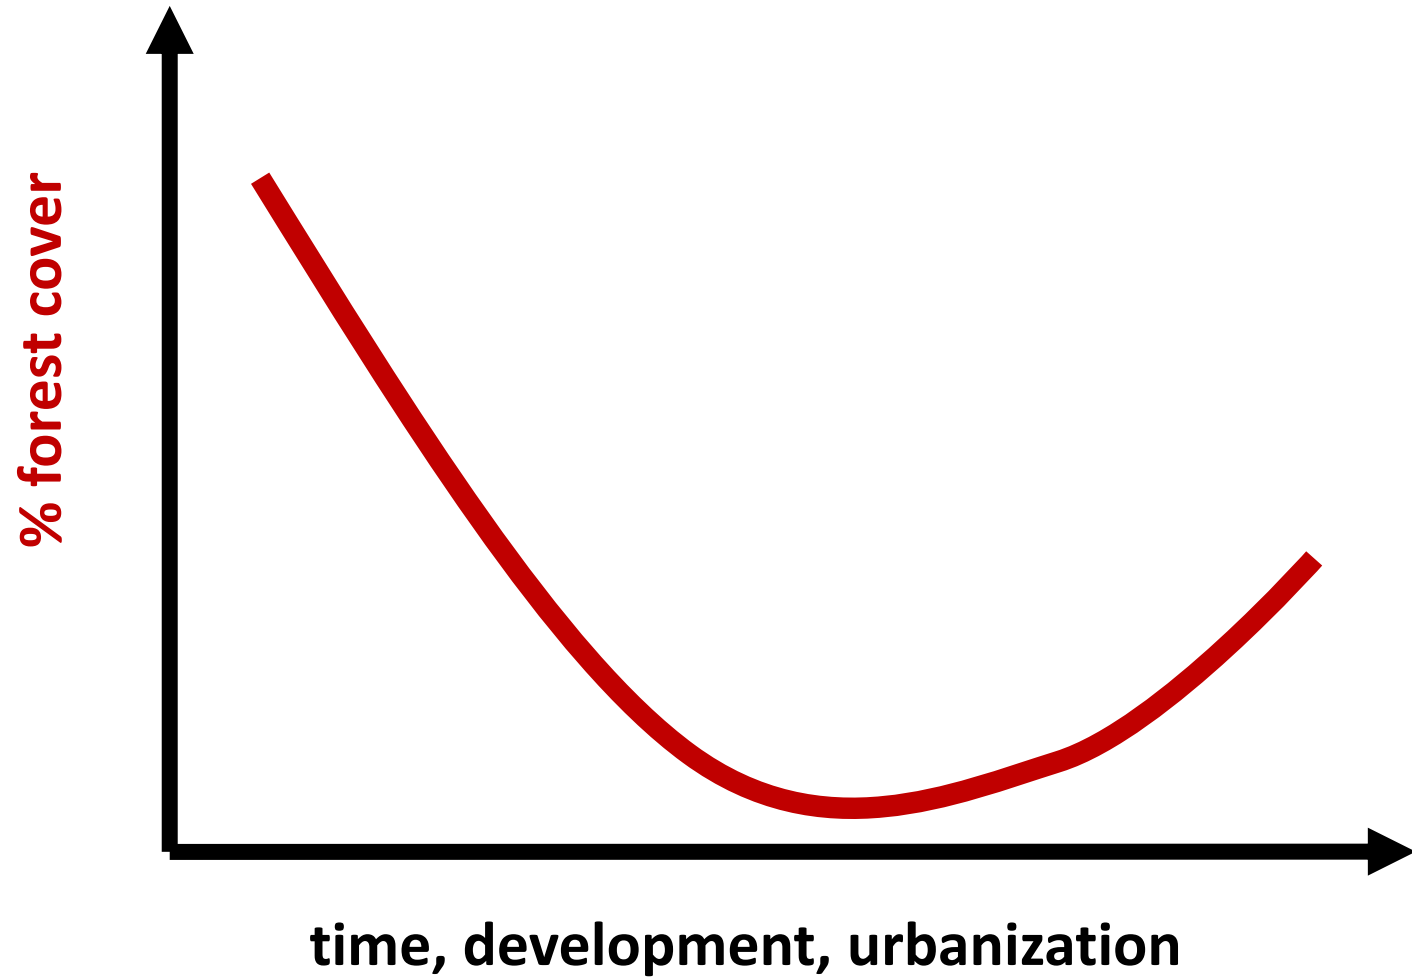

Empty half the Earth of its humans.
It's the only way to save the planet

Kim Stanley Robinson

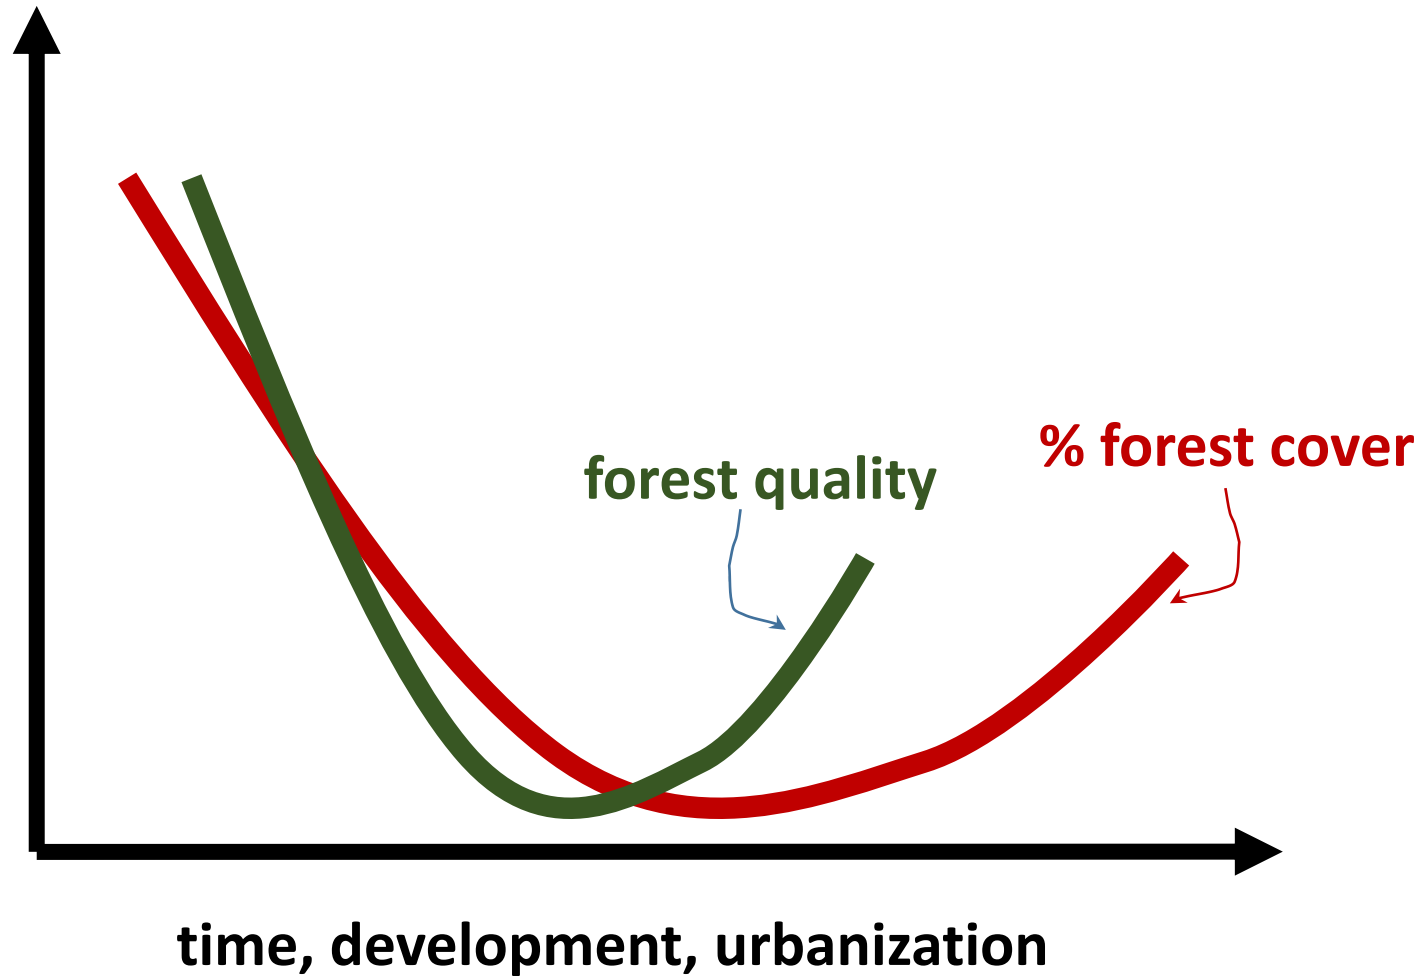

There are now twice as many people as 50 years ago. But, as EO Wilson has argued, they can all survive - in cities

FOREST TRANSITION

FOREST TRANSITION IN HUMAN-DOMINATED, FOREST-DEPENDENT LANDSCAPES

Will a forest transition occur here?

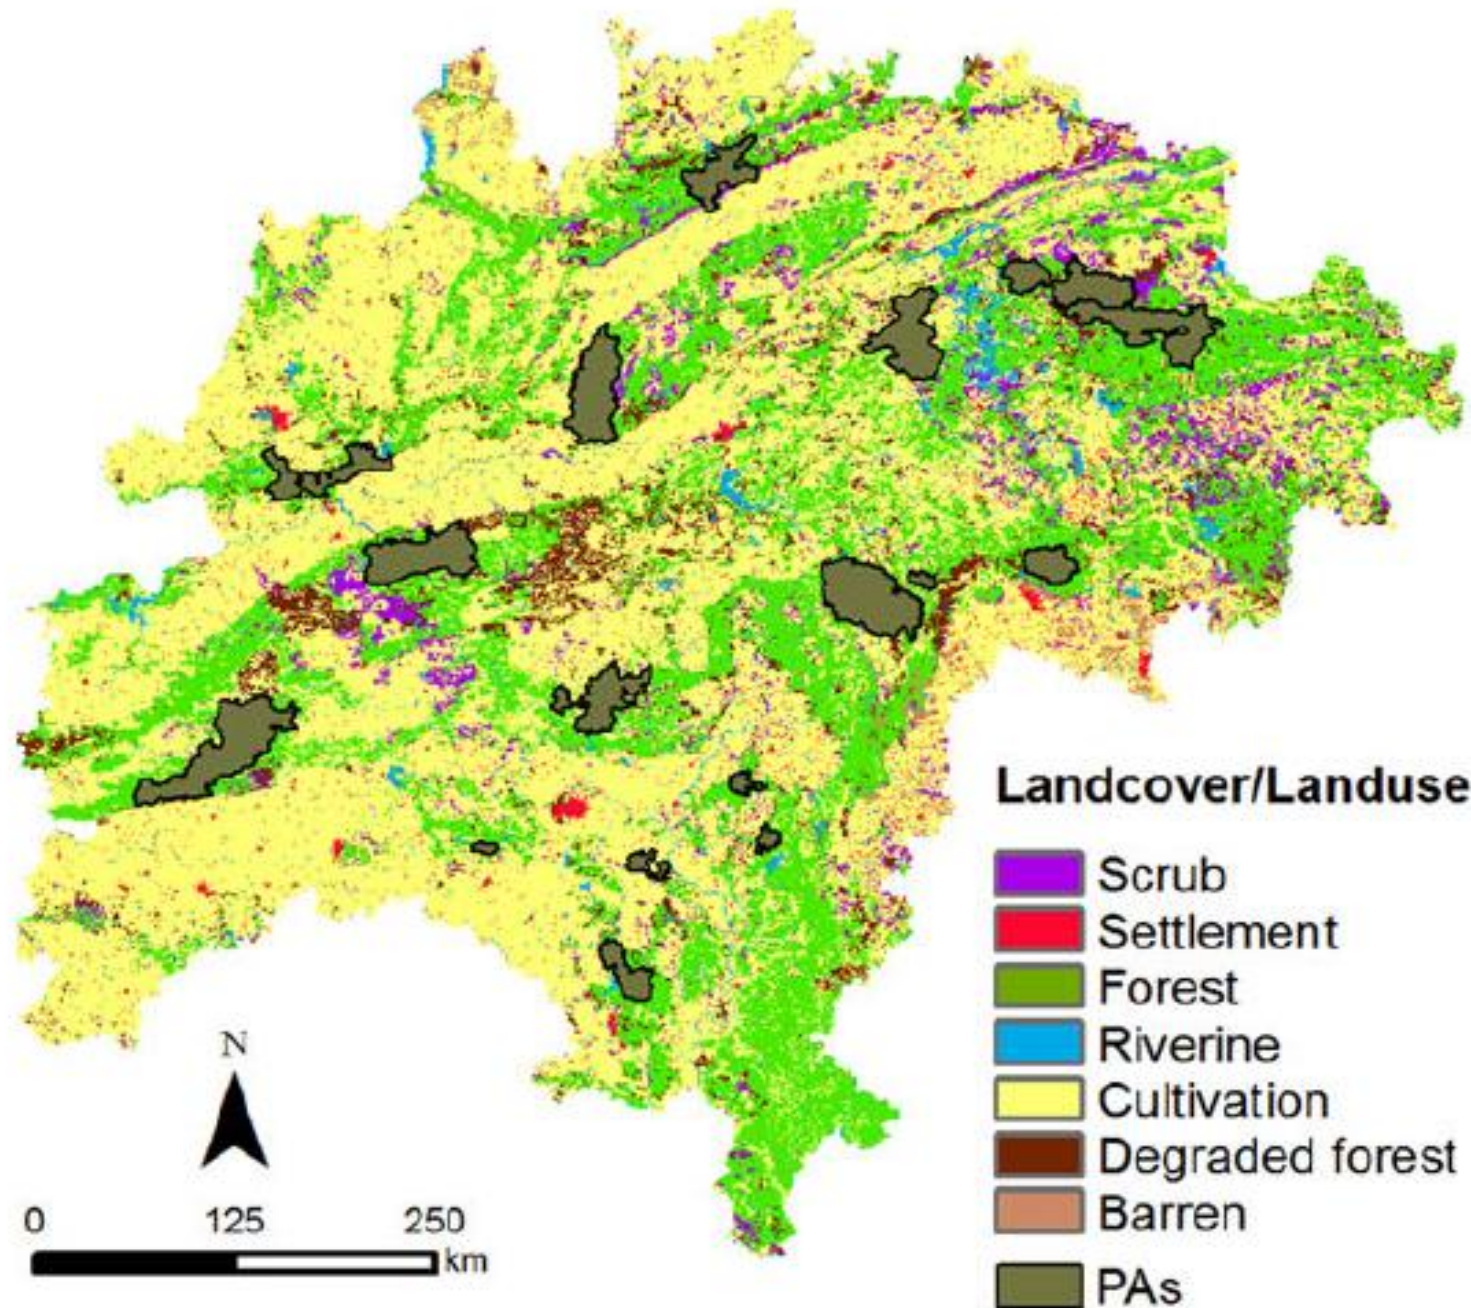

Fig. 3 Map showing least-cost corridors in the landscape. Lower resistance paths are shown in *green*, and *gray areas* represent higher cost-weighted distance (color figure online)

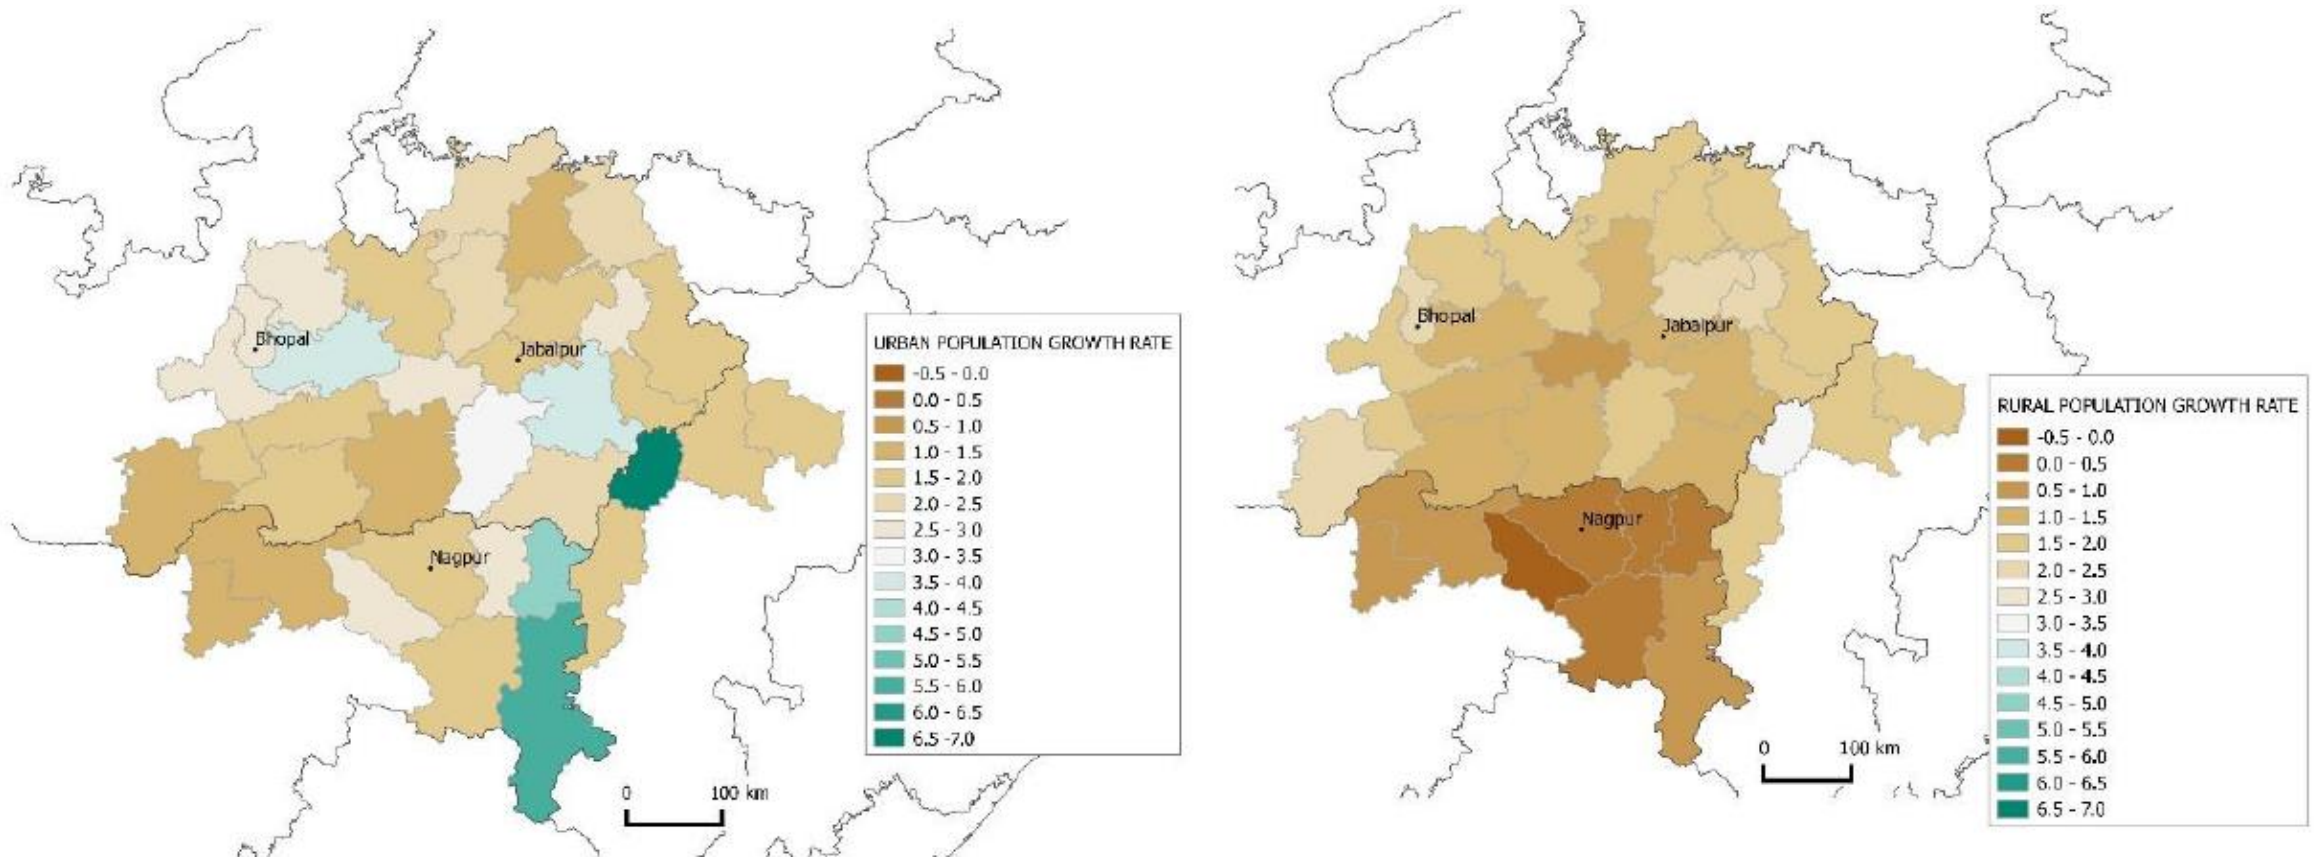

Connecting the dots: mapping habitat connectivity for tigers in central India

URBANIZATION OF LANDSCAPE (2001-2011)

Source: India district-level census

GOALS

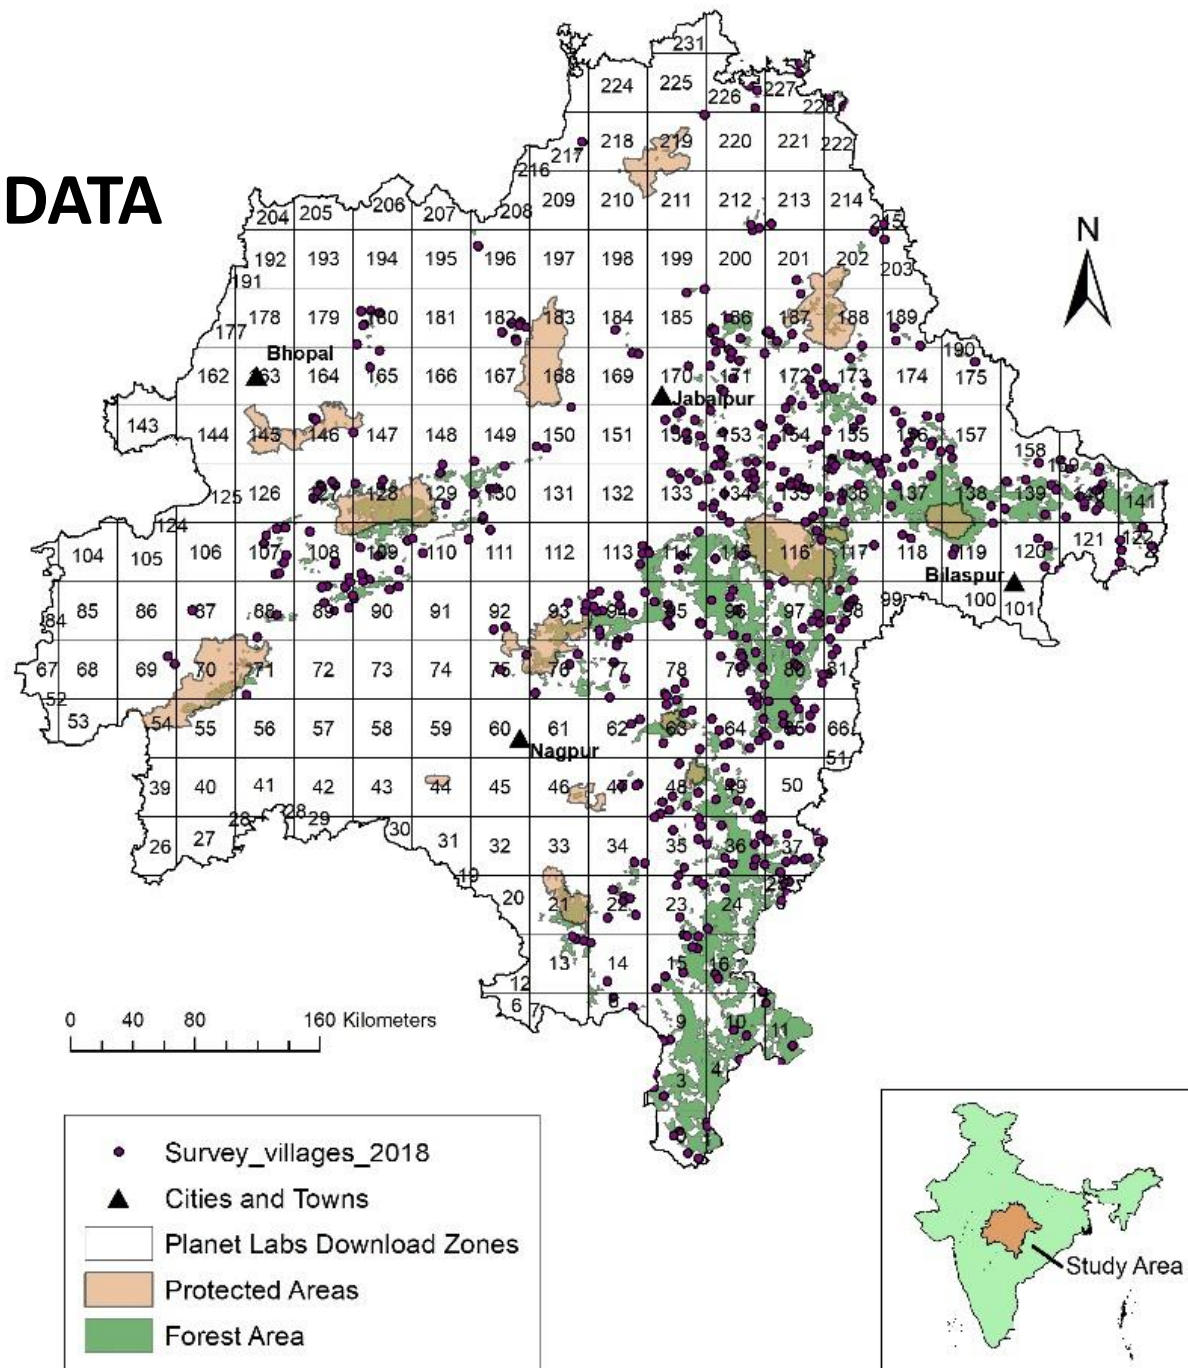

- **Identify remote sensing methods to monitor forest degradation and regeneration in tropical deciduous forests**
- **Understand how rapid urbanization is altering pressures on forests**

GOALS

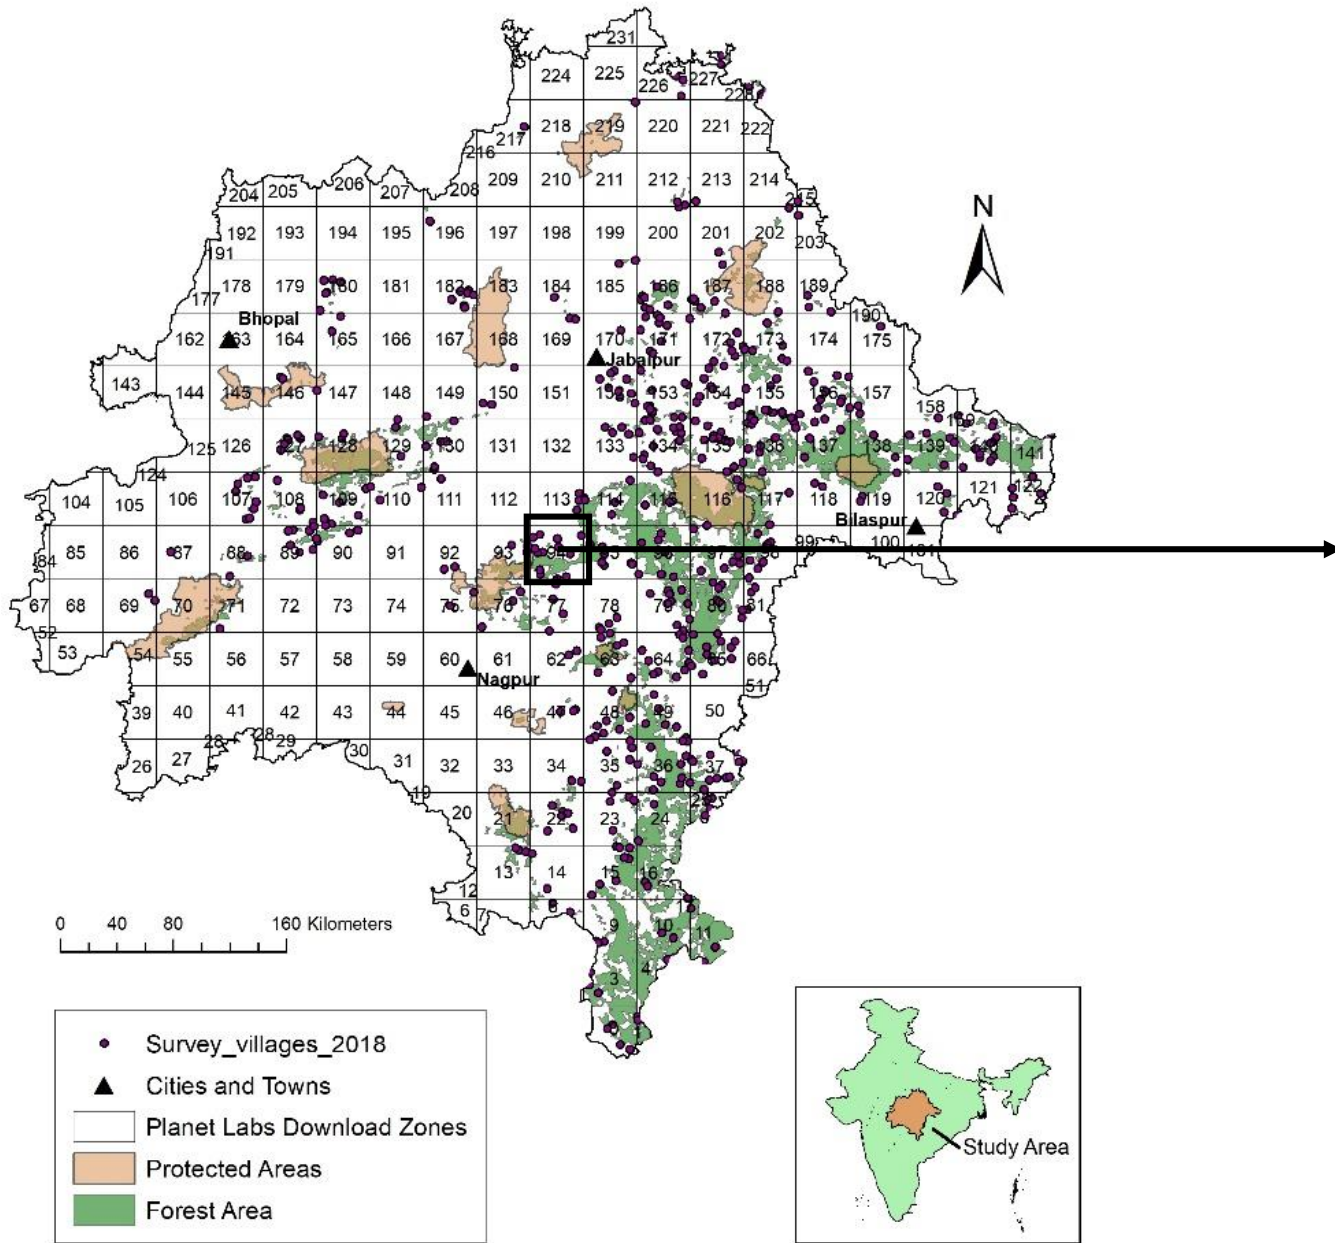

- Identify remote sensing methods to monitor **forest degradation** and regeneration in tropical deciduous forests
- Understand how rapid urbanization is altering pressures on forests

HIGH RESOLUTION PLANET LABS DATA

5000 HOUSEHOLD SURVEYS

PLANET LABS

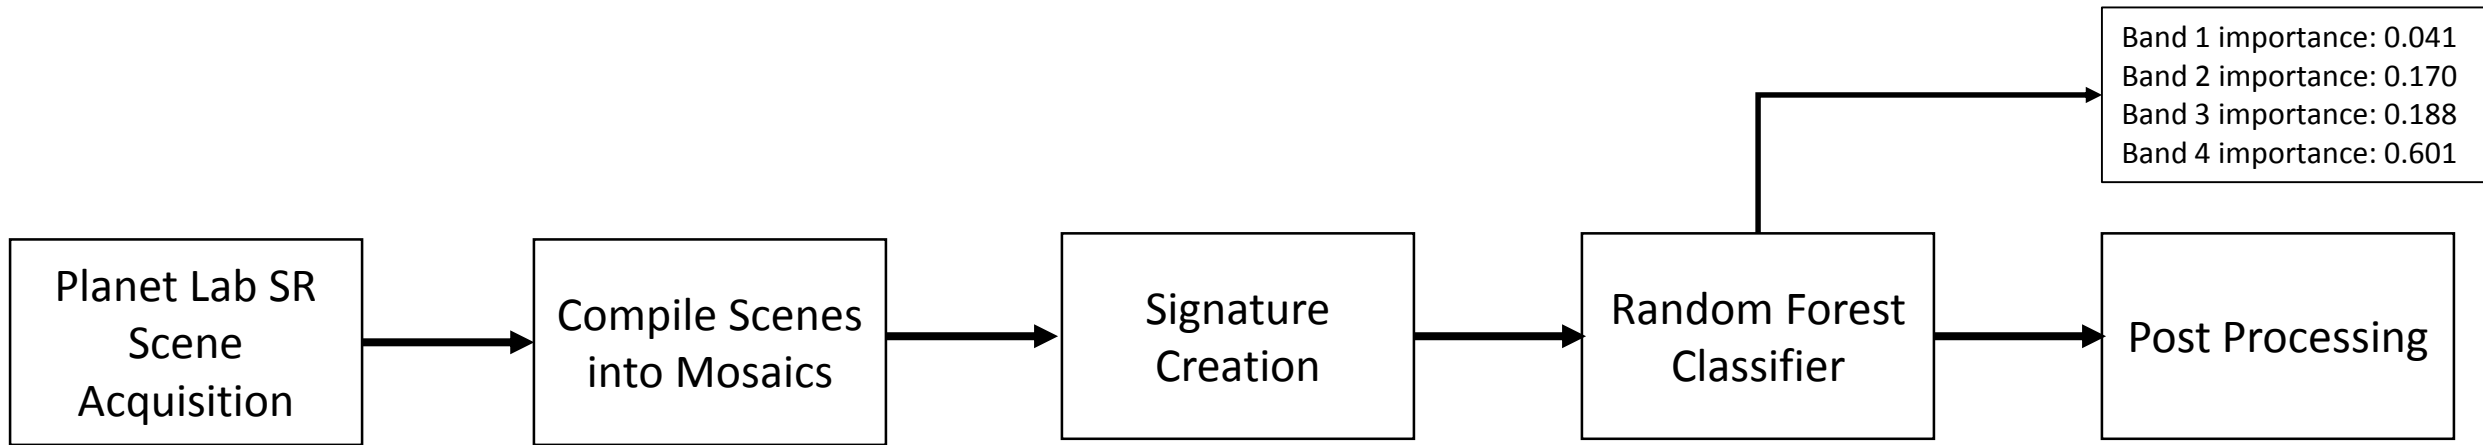

Mosaic of Planet Lab Scenes

- 22,141 by 22,141 pixels (~490 million pixels)
- 4 bands (R, G, B, NIR)

Classification Methodology

Development Environment:

- Mosaics and Signatures: ArcGIS
- Random Forest: Python
- Post Processing: Google Earth Engine and Roy et al. 2015 dataset

The plan is to transition all processes to Python

```
15  
16 # Import GDAL, NumPy, and matplotlib  
17 from osgeo import gdal, gdal_array  
18 from osgeo.gdalconst import *  
19 import sys  
20 import numpy as np  
21 import matplotlib.pyplot as plt  
22  
23 ##matplotlib inline  
24  
25 # Tell GDAL to throw Python exceptions, and register all drivers  
26 gdal.UseExceptions()  
27 gdal.AllRegister()  
28  
29 # Read in our image and ROI image  
30 img_ds = gdal.Open('D:/India/Study Area Zones/113/113_feb_mosaic_clip2.tif', gdal.GA_ReadOnly)  
31 roi_ds = gdal.Open('D:/India/Signatures/113_v2.gtif', gdal.GA_ReadOnly)  
32  
33 img = np.zeros((img_ds.RasterYSize, img_ds.RasterXSize, img_ds.RasterCount),  
34               gdal_array.GDALTypeCodeToNumericTypeCode(img_ds.GetRasterBand(1).DataType))  
35 for b in range(img.shape[2]):  
36     img[:, :, b] = img_ds.GetRasterBand(b + 1).ReadAsArray()  
37  
38 roi = roi_ds.GetRasterBand(1).ReadAsArray().astype(np.uint8)  
39
```

Kanha-Pench Corridor

- Four mosaics
- Each mosaic is approximately 38 x 38 km
- The four mosaics together have ~1.96 billion pixels

 Cropland

 Built Environment

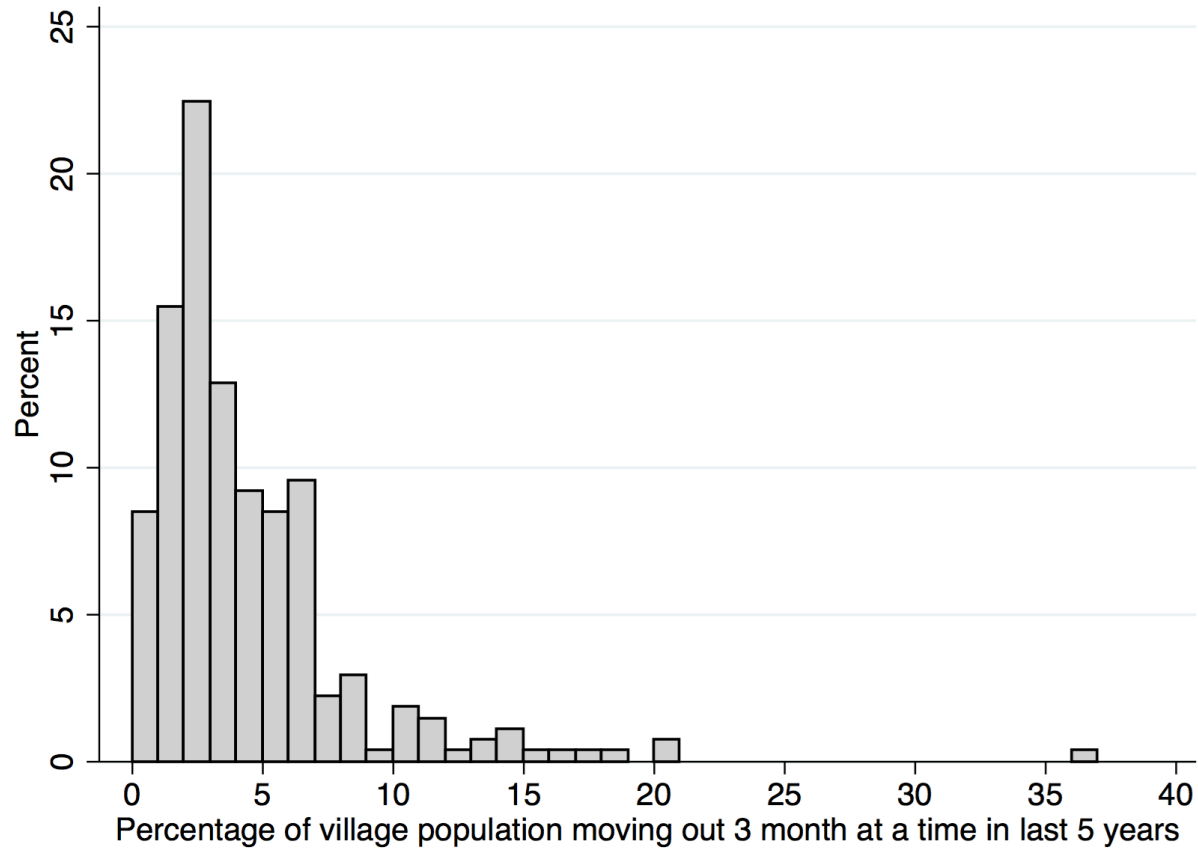

- Survey data collected January - April
- 2539/5000 observations
- 254/500 villages
- Household questions: socio-economics, migration, forest use
- Village questions: migration, history

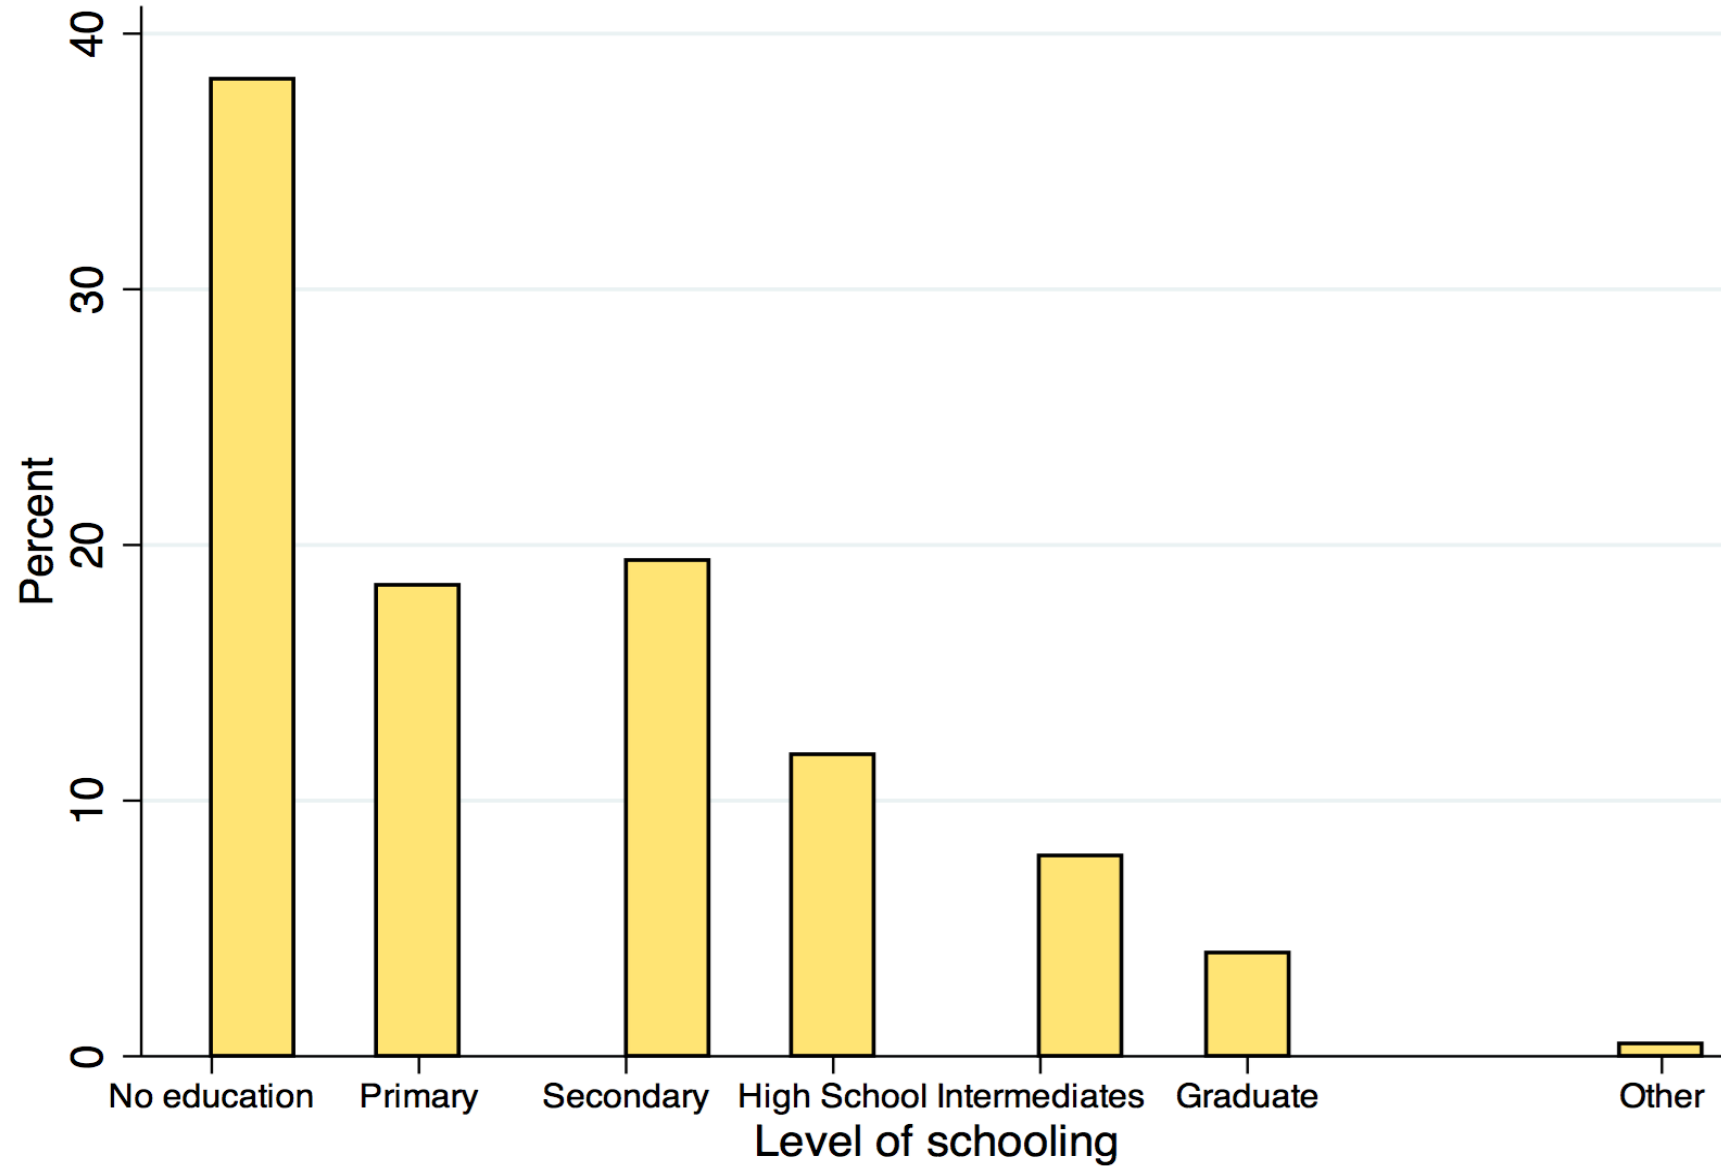

Village level: not much permanent migration

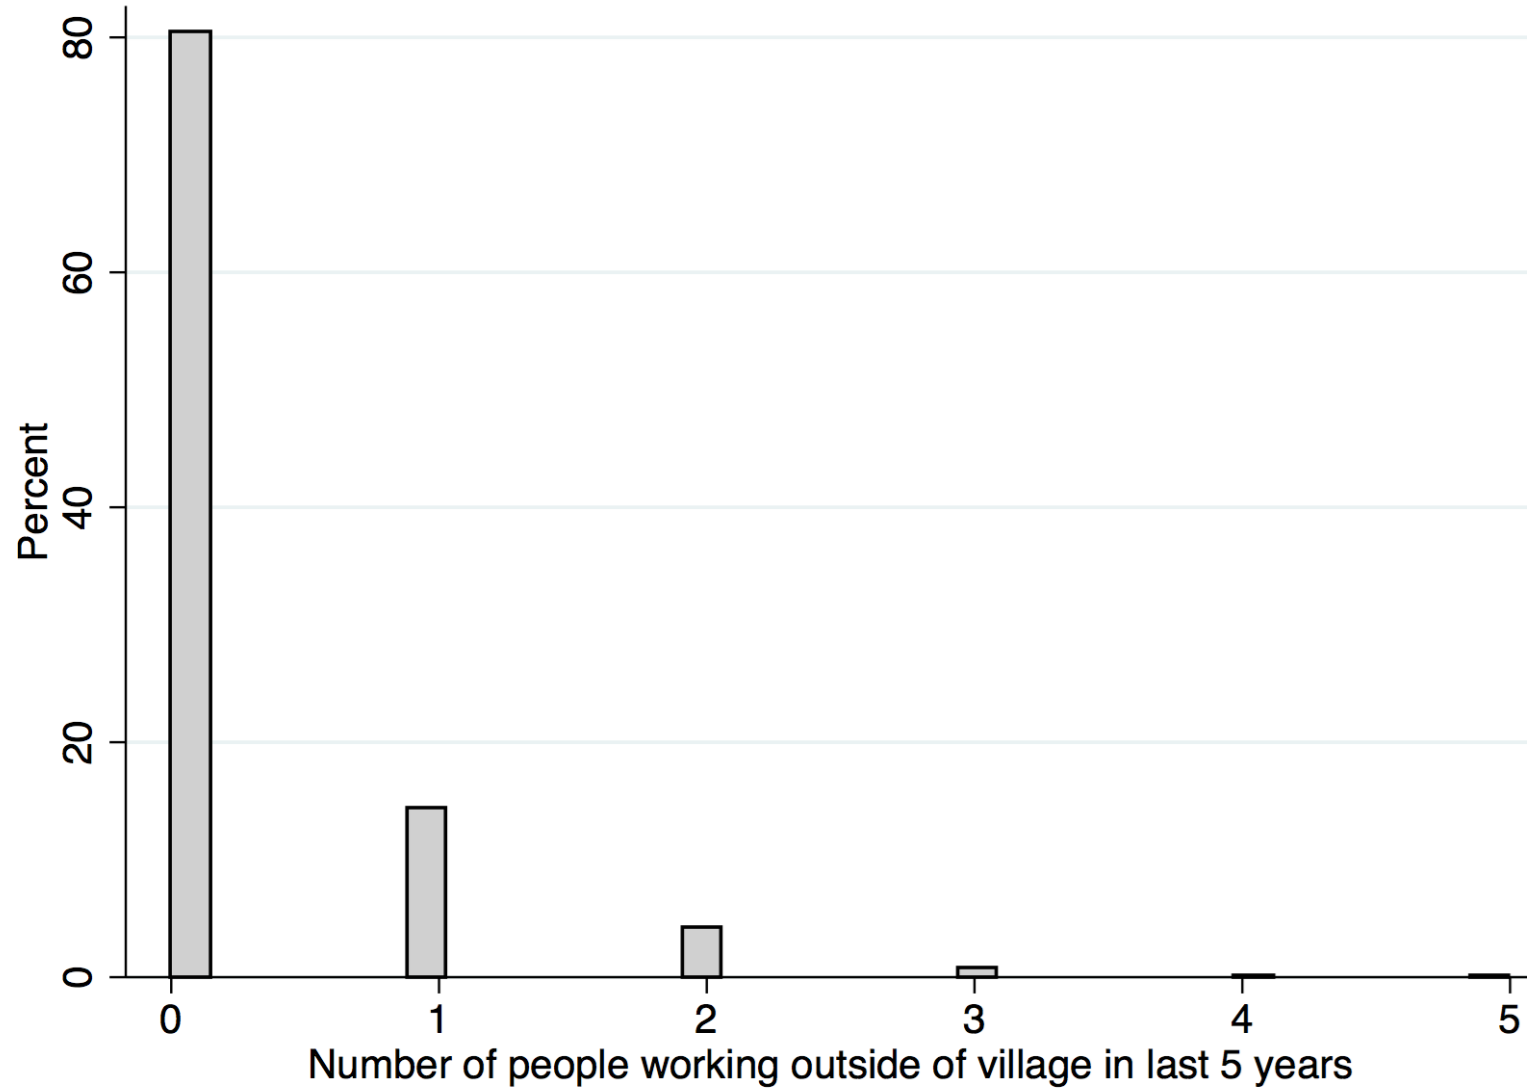

Village level: lots of seasonal migration

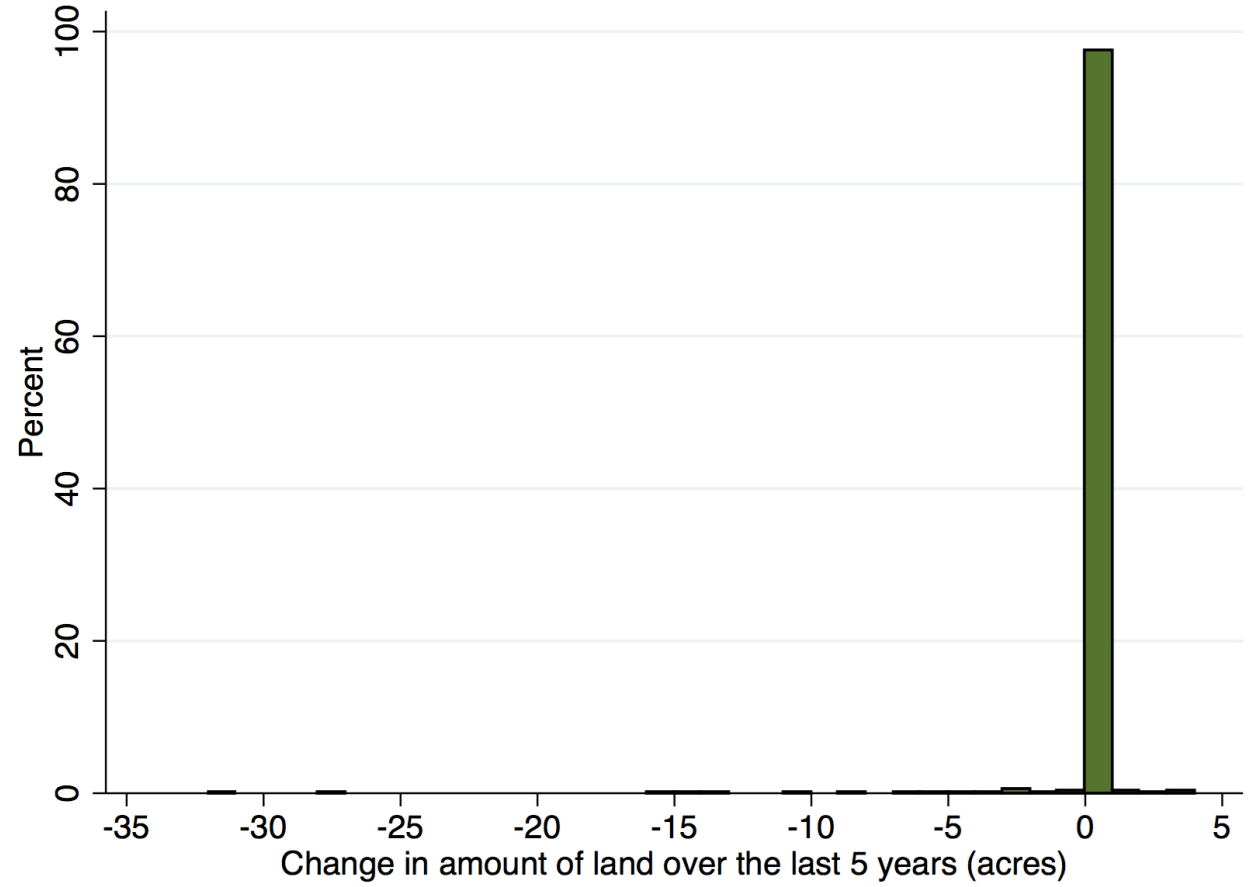

Household survey: education

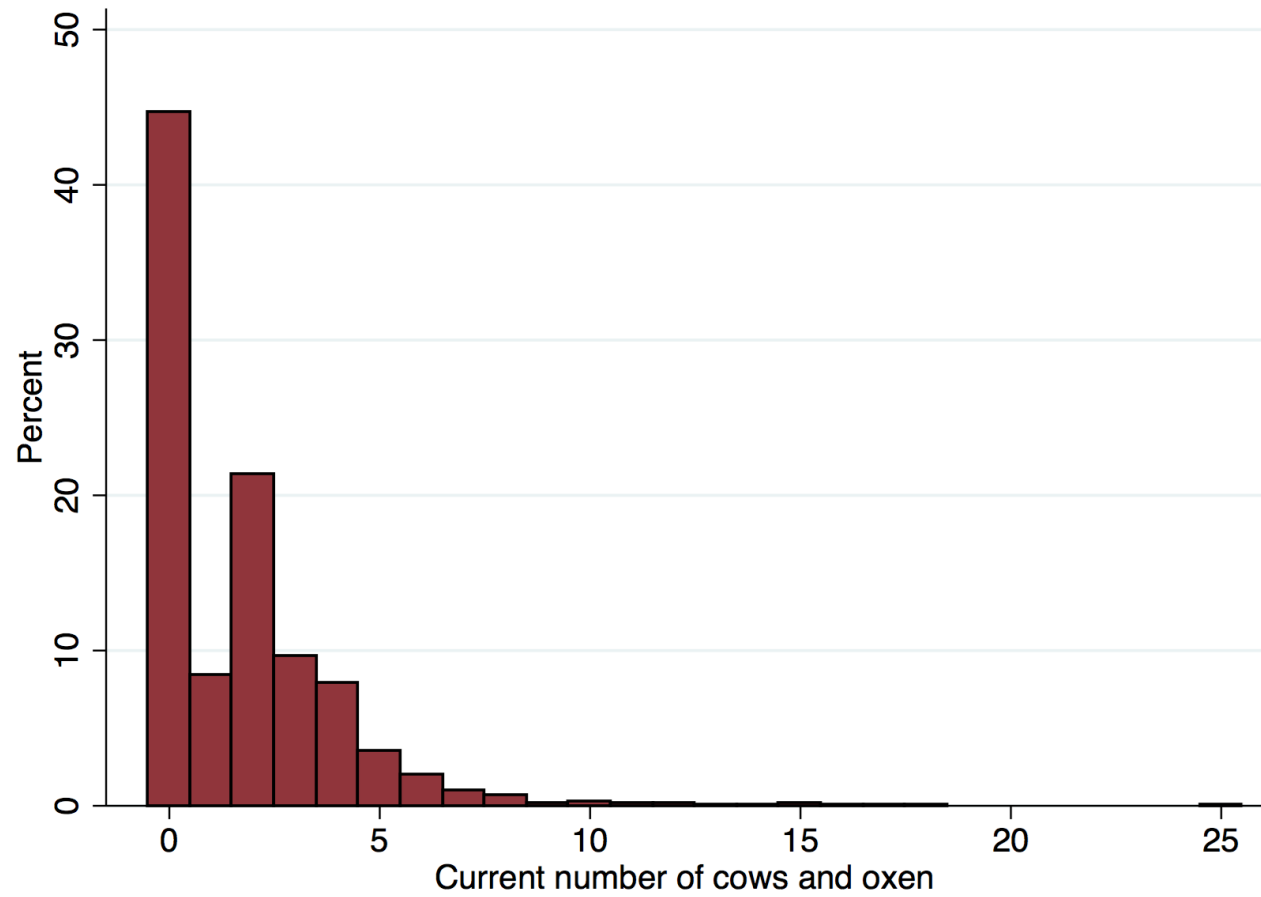

Household survey: 80% of hhs with no one working outside village

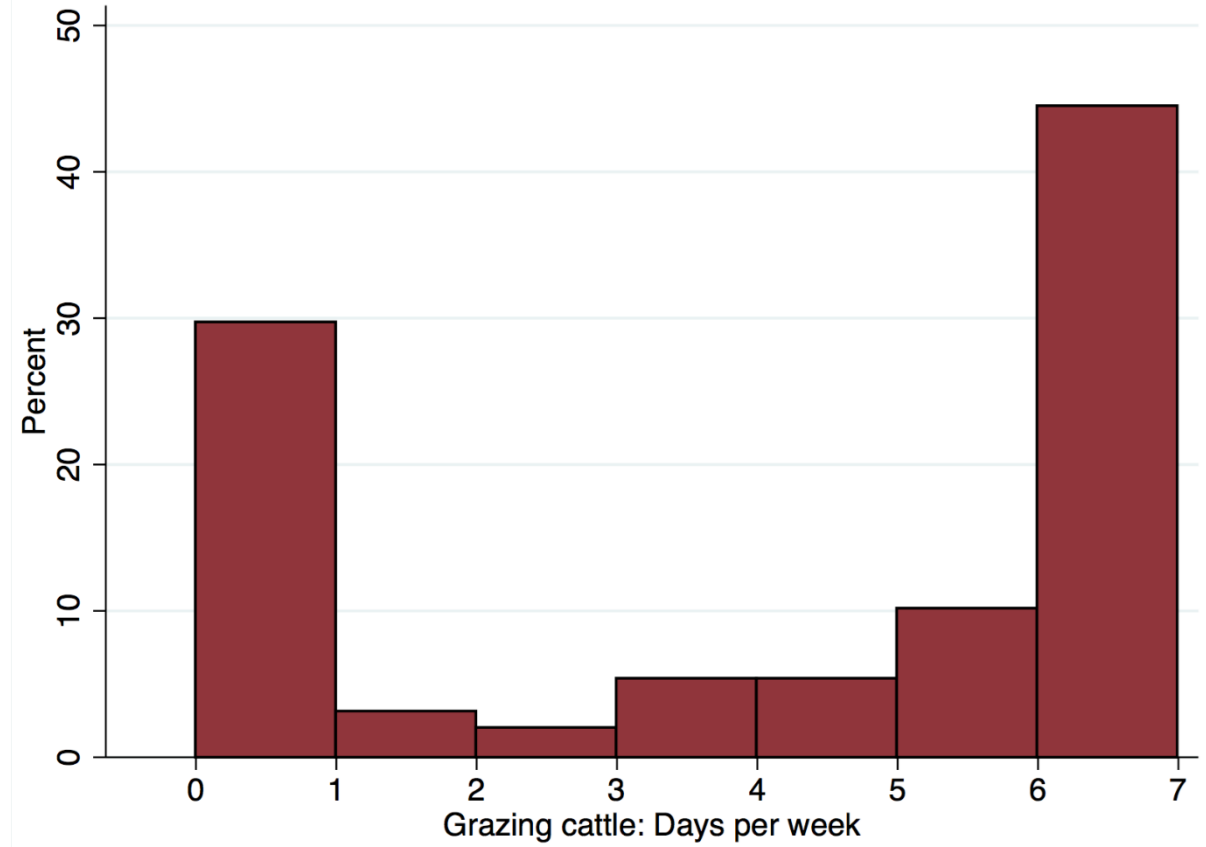

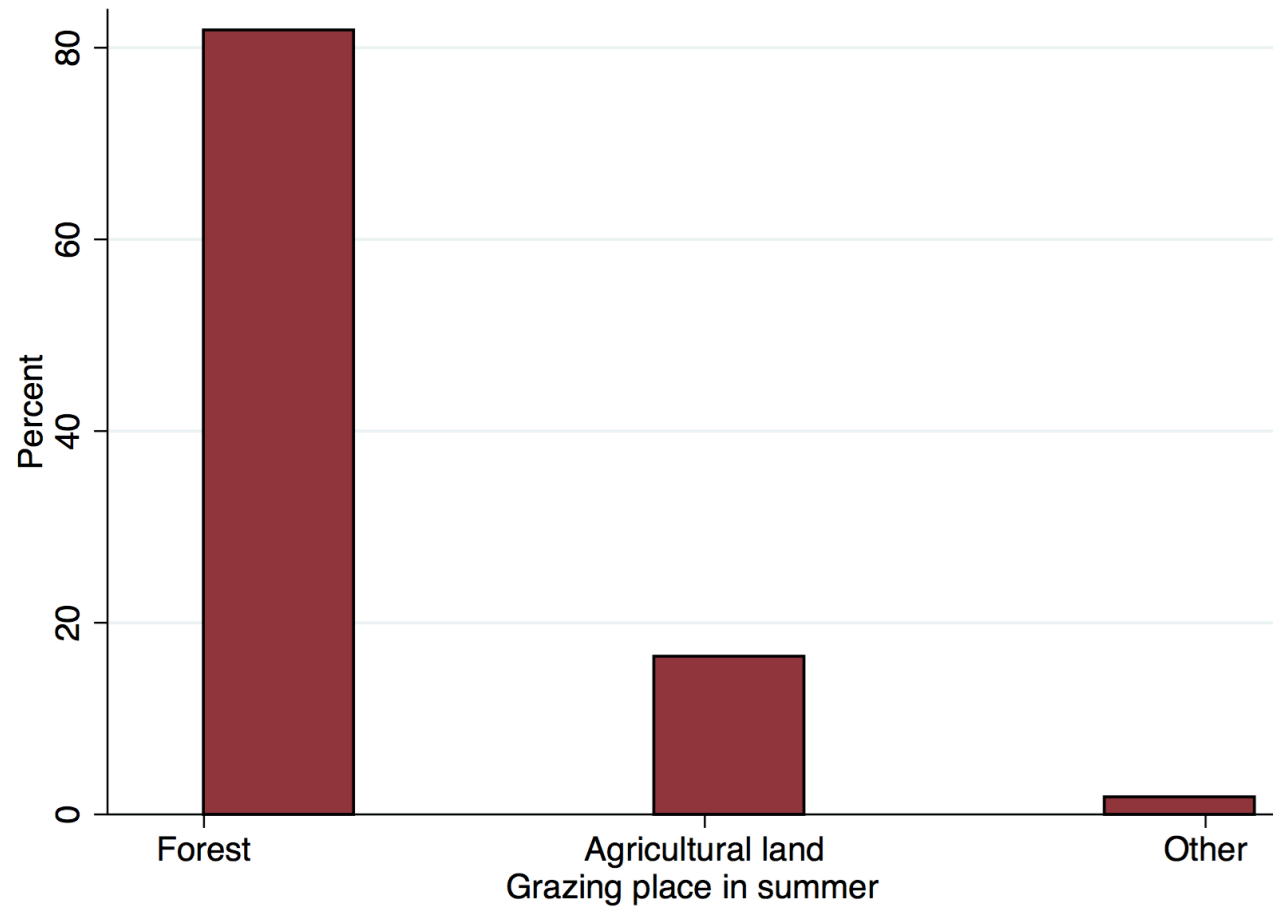

Land ownership

Land use: cows and oxen

Land use: cattle

Land use: NTFP (excluding 53% not collecting)

Quality of forest

PRELIMINARY DIRECTIONS

- **Cautiously optimistic about Planet Labs data to quantify degradation as % exposed soil**
- **Survey results indicate range in migration patterns and forest use**
- **Associate off-farm employment with forest use from hh surveys and remote sensing degradation metric with village surveys**

POSSIBLE POLICY/SOCIETAL RELEVANCE???

- Should state governments promote urban migration or staying-on-the farm?
- Where to target efforts to improve forest quality in corridors?
- In-house ability to monitor changes in forest quality

THANKS
